Product's definition

Category

In which category the product is classified ?

ELECTRONIC / MEASURING DEVICES - Lamp (cap lamp, LED, neon lantern, rainproof torch...)

Definition

What is the exact definition of the product ?

And if it exists, what is the interpretation of the authorities regarding it ?

This card includes multiple products per Decathlon's request. These products may include several regulated components.

For all federal and state requirements applicable to batteries please see the Batteries card.

Federal Law:

FCC Regulations for Radio Frequency Devices (Intentional Radiators). Some electronic products will be considered an "intentional radiator" under Federal Communication Commission ("FCC") rules. Intentional radiators are defined as any "device that intentionally generates and emits radio frequency energy by radiation or induction." [47 C.F.R. § 15.3\(o\)](#). According to [FCC guidance](#), this includes products that contain Bluetooth or WiFi connectivity. It does not appear that the products in this category will be considered "intentional radiators," but in the event that Decathlon sells a product that appears to come within this definition, please see the "Electronic equipment with Bluetooth" card for further information on regulations applicable to intentional radiators. Note that where that card refers to Bluetooth specifically, it is equally applicable to all other "intentional radiators" as defined above.

FCC Regulations for Radio Frequency Devices (Unintentional Radiators). If an electronic product is not considered an "intentional radiator," it will very likely be considered an "unintentional radiator." An unintentional radiator is defined as "a device that intentionally generates radio frequency energy [Electromagnetic energy at any frequency in the radio spectrum between 9 kHz and 3,000,000 MHz] for use within the device, or that sends radio frequency signals by conduction to associated equipment via connecting wiring, but which is not intended to emit RF energy by radiation or induction." [47 C.F.R. § 15.3\(z\)](#). According to [FCC guidance](#), the majority of modern electronic products that are not considered "intentional radiators" will be regulated as "unintentional radiators." For requirements applicable to unintentional radiators, please see the relevant provisions in the "Sun Charger/Electrical Charger" card.

Labelling

Language

In which language must the information on the product or on the packaging be indicated? If English is sufficient please indicate NA.

English

Mandatory labelling on product

What are the mandatory labelling on the product ?

For all federal and state requirements applicable to batteries please see the Batteries card.

Federal Law:

Energy Labeling Rule. The Energy Labeling rule requires manufactures to provide information about the energy efficiency of their bulbs. [16 C.F.R. Part 305](#); Federal Trade Commission, [The FTC "Lighting Facts" Label: Questions and Answers for Manufacturers](#), (last updated Dec.2017). This rule applies to general service incandescent lamps, but does not apply to several types of lamps including bug lamps, mine service lamps, and colored lamps as defined at [42 U.S.C. § 6291\(30\)](#). [16 C.F.R. § 305.5\(e\)\(3\)\(ii\)](#). This labeling requirement may not apply to all lamps sold by Decathlon. For lamps to which this labeling requirement does apply, the lamp should be labeled legibly with the lamp's "average initial lumens, expressed as a number rounded to the nearest five, adjacent to the word 'lumens,' both provided in minimum 8 point font." [16 C.F.R. § 305.23\(b\)\(7\)\(i\)](#). If the lamp contains mercury, the lamp must be labeled with the following statement: "Mercury disposal: [epa.gov/cfl](#)" in minimum 8 point font. [16 C.F.R. § 305.23\(b\)\(7\)\(ii\)](#).

FCC Regulations for Radio Frequency Devices. For any electronic products in this category that qualify as "intentional radiators" as defined in the Definitions section, please see the "Electronic Equipment with Bluetooth" card for relevant requirements. For electronic products in this category that qualify as "unintentional radiators" as defined in the Definitions section, please see the "Sun Charger/Electrical Charger" card.

Maine Law:

Maine Law (Mercury-Added Products). A retailer may not knowingly sell a mercury-added product unless the item is labeled. "The label must clearly inform the purchaser or consumer that mercury is present in the item and that the item may not be disposed of or placed in a waste stream destined for disposal until the mercury is removed and reused, recycled or otherwise managed to ensure that it does not become part of solid waste or wastewater. Manufacturers shall affix to mercury-added products labels that conform to the requirements of this subsection." [38 M.R.S. § 1662](#). The label must be consistent with the requirements at Chapter 870. The label must "clearly inform the purchaser and consumer, using words or symbols, that the product contains mercury and may not be disposed of or placed in a waste stream destined for disposal until the mercury is removed and reused, recycled or otherwise managed to ensure that mercury does not become part of solid waste or wastewater. The following wording is acceptable: 'Contains Mercury. Don't Put in Trash. Recycle or Manage as Hazardous Waste.'" [06-96-870 Me. Code R. § 5\(A\)](#). The label must be affixed to the product in at least 10 point font. Id. at § 5(B). If the product is sold in packaging that obscures the label, the packaging must also be labeled. Id. at § 5(D).

Massachusetts Law:

Massachusetts Law (Mercury-Added Products). No one may sell a mercury-added product unless the product is labeled by the manufacturer as follows. [M.G.L. c.21H](#), § 6K, [310 CMR 75](#). A "mercury-added product" is a product to which the manufacturer intentionally introduces mercury. The label must clearly inform the purchaser that mercury is present in the product and that the product shall be reused, recycled or properly disposed of as hazardous waste. The label must be constructed of materials that are sufficiently durable to remain legible for the useful life of the product. These laws do not apply to the labeling of those products whose only mercury component is a removable mercury-added lamp or button cell battery.

Before a mercury-added product is sold in Massachusetts, the manufacturer must (1) submit a compliant labeling plan to the Massachusetts Department of Environmental Protection, or (2) label the product in compliance with a labeling plan approved by another state that is a member of the Interstate Mercury Education and Reduction Clearinghouse. Where labels on the product or product packaging are not clearly visible and legible to prospective purchasers and product users prior to purchase, (e.g., in sales transactions that occur over the internet, telephone or postal service), the manufacturer or retailer must clearly inform the purchaser as part of the product's description either in the catalog or on the website used to place the online order that the product contains mercury and clearly specify that the mercury-added product be reused, recycled or properly disposed of as hazardous waste at the end of the product's useful life.

New York Law:

New York Law (Mercury-Added Products). A "mercury-added consumer product" is "any device or material into which elemental mercury or mercury compounds are intentionally added during such device's or material's formulation or manufacture, and in which the continued presence of mercury is required to provide a specific characteristic, appearance or quality, or to perform a specific function. Such term shall include, but not be limited to mercury-containing: . . . (b) thermometers . . . (d) medical or scientific instruments; (e) electrical relays and other electrical devices; (f) lamps; and (g) batteries sold to consumers, not including button batteries." [N.Y. Env't Conserv. L. § 27-2101](#).

The labeling of "mercury-added consumer products" must clearly and conspicuously state that mercury is present in the product and the product must not be disposed of or placed in a waste stream destined for disposal in mixed municipal solid waste until the mercury is removed and reused, recycled or otherwise managed to ensure that the mercury does not become part of solid waste or contaminate groundwater. [NY Env't Conserv. L. § 27-2103](#). The labeling must be conspicuous to the consumer prior to purchase, and during the installation and removal of the product, and affixed to the product so as to remain legible for the useful life of the product. [NY Env't Conserv. L. § 27-2103](#).

Mandatory labelling on packaging

What are the mandatory labelling on the packaging ?

Some of the mandatory labels described in the product labelling section above may be placed on the packaging as an alternative. Please see the product labelling section for more details.

For all federal and state requirements applicable to batteries please see the Batteries card.

Federal Law:

Energy Labeling Rule. The Energy Labeling rule requires manufactures to provide information about the energy efficiency of their bulbs. [16 C.F.R. Part 305](#); Federal Trade Commission, [The FTC "Lighting Facts" Label: Questions and Answers for Manufacturers](#), (last updated Dec. 2017). This rule applies to general service incandescent lamps, but does not apply to several types of lamps including bug lamps, mine service lamps, and colored lamps as defined at [42 U.S.C. § 6291\(30\)](#). [16 C.F.R. § 305.5\(e\)\(3\)\(ii\)](#). This labeling requirement may not apply to all lamps sold by Decathlon. For lamps to which this rule does apply, the principal display panel must contain the light output of each lamp in the package, expressed as "Brightness" and the estimated annual energy cost of each lamp in the package, expressed as "Estimated Energy Cost" in dollars and based on usage of 3 hours per day and 11 cents (\$0.11) per kWh. [16 C.F.R. § 305.23\(b\)](#). The brightness must appear first followed by the energy cost and appear as depicted in [16 C.F.R. § 305.23\(b\)\(2\)](#); [Appendix L to Part 305, Title 16](#).

The side or rear display panel must be labeled with a "Lighting Facts" labeled with the following information in the following order:

"(i) The light output of each lamp included in the package, expressed as "Brightness" in average initial lumens rounded to the nearest five;

(ii) The estimated annual energy cost of each lamp included in the package based on the average initial wattage, a usage rate of 3 hours per day and 11 cents (\$0.11) per kWh and explanatory text as illustrated in Prototype Label 6 in [appendix L of this part](#);

- (iii) The life, as defined in this part, of each lamp included in the package, expressed in years rounded to the nearest tenth (based on 3 hours operation per day);
- (iv) The correlated color temperature of each lamp included in the package, as measured in degrees Kelvin and expressed as "Light Appearance" and by a number and a marker in the form of a scale as illustrated in Prototype Label 6 to [appendix L of this part](#) placed proportionately on the scale where the left end equals 2,600 K and the right end equals 6,600 K;
- (v) The wattage, as defined in this part, for each lamp included in the package, expressed as energy used in average initial wattage;
- (vi) The ENERGY STAR logo as illustrated in Prototype Label 6 to [appendix L of this part](#) for certified products, if desired by the manufacturer or private labeler. Only manufacturers or private labelers that have signed a Memorandum of Understanding with the Department of Energy or the Environmental Protection Agency may add the ENERGY STAR logo to labels on certified covered products; such manufacturers or private labelers may add the ENERGY STAR logo to labels only on those products that are covered by the Memorandum of Understanding;
- (vii) The design voltage of each lamp included in the package, if other than 120 volts;
- (viii) For any general service lamp containing mercury, the following statement: 'Contains Mercury For more on clean up and safe disposal, visit epa.gov/cfl.' The manufacturer may also print an 'Hg[Encircled]' symbol on the label after the term 'Contains Mercury'; and
- (ix) No marks or information other than that specified in this part shall appear on the Lighting Facts label." [16 C.F.R. § 305.23\(b\)\(3\)](#).

FCC Regulations for Radio Frequency Devices. For any electronic products in this category that qualify as "intentional radiators" as defined in the Definitions section, please see the "Electronic Equipment with Bluetooth" card for relevant requirements. For electronic products in this category that qualify as "unintentional radiators" as defined in the Definitions section, please see the "Sun Charger/Electrical Charger" card.

Maine Law:

Maine Law (Mercury-Added Products). A retailer may not knowingly sell a mercury-added product unless the item is labeled. "The label must clearly inform the purchaser or consumer that mercury is present in the item and that the item may not be disposed of or placed in a waste stream destined for disposal until the mercury is removed and reused, recycled or otherwise managed to ensure that it does not become part of solid waste or wastewater. Manufacturers shall affix to mercury-added products labels that conform to the requirements of this subsection." [38 M.R.S. § 1662](#). The label must be consistent with the requirements at Chapter 870. The label must "clearly inform the purchaser and consumer, using words or symbols, that the product contains mercury and may not be disposed of or placed in a waste stream destined for disposal until the mercury is removed and reused, recycled or otherwise managed to ensure that mercury does not become part of solid waste or wastewater. The following wording is acceptable: 'Contains Mercury. Don't Put in Trash. Recycle or Manage as Hazardous Waste.'" [06-96-870 Me. Code R. § 5\(A\)](#). The label must be affixed to the product in at least 10 point font. Id. at § 5(B). If the product is sold in packaging that obscures the label, the packaging must also be labeled. Id. at § 5(D).

Massachusetts Law:

Massachusetts Law (Mercury-Added Products). In addition to the label on the product, the packaging for a mercury-added product must also be labeled, except when the product label can easily be viewed through the packaging, to inform prospective purchasers and product users, prior to purchase, that the product contains mercury and will need to be managed properly at the end of its useful life [M.G.L. c.21H](#), § 6K, [310 CMR 75](#). The label must be consistent with the product labeling requirements.

Where labels on the product or product packaging are not clearly visible and legible to prospective purchasers and product users prior to purchase, (e.g., in sales transactions that occur over the internet, telephone or postal service), the manufacturer or retailer must clearly inform the purchaser that the product contains mercury and shall clearly specify that the mercury-added product be reused, recycled or properly disposed of as hazardous waste at the end of the product's useful life, as part of the product's description either in the catalog or on the website used to place the online order.

New York Law:

New York Law (Mercury-Added Products). A “mercury-added consumer product” is “any device or material into which elemental mercury or mercury compounds are intentionally added during such device's or material's formulation or manufacture, and in which the continued presence of mercury is required to provide a specific characteristic, appearance or quality, or to perform a specific function. Such term shall include, but not be limited to mercury-containing: . . . (b) thermometers . . . (d) medical or scientific instruments; (e) electrical relays and other electrical devices; (f) lamps; and (g) batteries sold to consumers, not including button batteries.” [N.Y. Env't Conserv. L. § 27-2101](#).

The labeling of “mercury-added consumer products” must clearly and conspicuously state that mercury is present in the product and the product must not be disposed of or placed in a waste stream destined for disposal in mixed municipal solid waste until the mercury is removed and reused, recycled or otherwise managed to ensure that the mercury does not become part of solid waste or contaminate groundwater. [NY Env't Conserv. L. § 27-2103](#). The labeling must be conspicuous to the consumer prior to purchase, and during the installation and removal of the product, and affixed to the product so as to remain legible for the useful life of the product. [NY Env't Conserv. L. § 27-2103](#).

Mandatory labelling on the instructions manual

What are the mandatory labelling on the instructions manual (if one is required) ?
In which format, do we have to deliver the instruction manual to our customers ?

Federal Law:

FCC Regulations for Radio Frequency Devices. For any electronic products in this category that qualify as “intentional radiators” as defined in the Definitions section, please see the “Electronic Equipment with Bluetooth” card for relevant requirements. For electronic products in this category that qualify as “unintentional radiators” as defined in the Definitions section, please see the “Sun Charger/Electrical Charger” card.

Warnings - General ones

Are general warnings required ? If yes, which ones ?

Federal Law:

No warnings are required; however, in general, instructions or labels should identify all reasonably foreseeable hazards associated with a product and state the consequences of consumer actions explicitly. See CPSC, [Mfr.'s Guide to Developing Consumer Prod. Instructions](#) (October 2003).

Warnings - Specific ones

Are specific warnings required ? If yes which ones ?

For all federal and state requirements applicable to batteries please see the Batteries card.

Illinois Law:

Illinois Law (Lead). No one may sell any lead-bearing substance that may be used by the general public, unless it bears a warning statement as provided by federal law ([410 ILS 45](#)). If no federal rule exists, lead-bearing substances that contain lead-based paint or other form of lead must be labeled as: ““WARNING CONTAINS LEAD. MAY BE HARMFUL IF EATEN OR CHEWED. MAY GENERATE DUST CONTAINING LEAD. KEEP OUT OF THE REACH OF CHILDREN.” The warning statement must be located in a prominent place on the item or package, such that consumers are likely to see the statement when it is examined under retail conditions. The statement must be conspicuous and not obscured by other written matter. The statement must be legible and contrast with the typography, layout, and color of the other printed matter. Compliance with [16 C.F.R. § 1500.121](#) constitutes compliance with these display requirements. The manufacturer or importer of record is

responsible for complying with these requirements. This requirement does not apply to any component part of a consumer electronic product, including, but not limited to, personal computers, audio and video equipment, calculators, wireless phones, game consoles, and handheld devices incorporating a video screen used to access interactive software and their associated peripherals, that is not accessible to a child through normal and reasonably foreseeable use of the product. A component part is not accessible if the component part is not physically exposed by reason of a sealed covering or casing and does not become physically exposed through reasonably foreseeable use and abuse of the product. Paint, coatings, and electroplating, singularly or in any combination, are not sufficient to constitute a sealed covering or casing. Coatings and electroplating are sufficient to constitute a sealed covering for connectors, power cords, USB cables, or other similar devices or components used in consumer electronics products.

"Lead-bearing substance" means any item containing or coated with lead such that the lead content is more than six-hundredths of one percent (0.06%) lead by total weight; or more than 1 milligram per square centimeter in the dried film of paint or previously applied substance. Id.

Target Age

Is there any target age applicable? If so, does it have to be indicated and in which form?

None identified.

Sanctions / Fines

What are the sanctions / fines in case of non conformity ?

For all federal and state requirements applicable to batteries please see the Batteries card.

Federal Law:

FCC Regulations for Radio Frequency Devices. For any electronic products in this category that qualify as "intentional radiators" as defined in the Definitions section, please see the "Electronic Equipment with Bluetooth" card for relevant sanctions information. For electronic products in this category that qualify as "unintentional radiators" as defined in the Definitions section, please see the "Sun Charger/Electrical Charger" card for relevant sanctions information.

Illinois Law:

Illinois Law (Lead). A manufacturer or importer who fails to properly label products containing paint or lead-bearing substances is subject to a civil fine between \$50 and \$5,000 per day and could face criminal penalties as well. [410 Ill. Comp. Stat. 45/12.2\(b\)](#).

Massachusetts Law:

Massachusetts Law (Mercury-Added Products). A violation of Massachusetts' laws regarding mercury-added products may be punished by a fine of up to \$25,000 and/or imprisonment for up to two years for each violation; or a civil penalty up to \$25,000 for each violation. Each day each violation occur is a separate offense [M.G.L. c.21H, § 8](#).

New York Law:

New York Law (Mercury-Added Products). Violation of New York's mercury-added consumer products labeling rules is punishable by a fine of up to \$100 for the first violation and up to \$500 for additional violations. [N.Y. Env't Conserv. L. § 71-2724](#).

Comments

Comments

Environment

Recycling - Eco taxes

Which regulations concerning ecodesign and recycling apply to this product? Are there any ecotaxes applicable to this category of product?

For all federal and state requirements applicable to batteries please see the Batteries card.

Massachusetts Law:

Massachusetts Law (Mercury-Added Products). No person may sell or distribute a mercury-added product in Massachusetts unless the manufacturer has created and filed with the Massachusetts Department of Environmental Protection a collection plan for end-of-life mercury-added products, including a manufacturer take-back system or a recycling plan, the requirements of which are detailed in the regulations. [M.G.L. c.21H § 6J](#), [310 CMR 75](#).

Every manufacturer of mercury-added products sold in Massachusetts is financially responsible for the collection and recycling systems and must pay an annual registration fee. These laws do not apply to mercury-added button cell batteries; mercury-added formulated products intended to be totally consumed in use, such as reagents, cosmetics, pharmaceuticals and other laboratory chemicals; or products where the only mercury contained in the product comes from a removable mercury-added button cell battery or a mercury-added lamp. *Id.*

A “mercury-added product” is a product to which the manufacturer intentionally introduces mercury, including, but not limited to, electric lamps. [M.G.L. c.21H § 2](#).

Washington Law:

Washington Law (Mercury-Containing Lamp). Producers of mercury-containing lights sold in Washington must participate in a product stewardship program. [RCW 70A.505.030-70A.505.901](#). This program is currently undergoing review and termination or possible extension. [RCW 70A.505.010](#), notes (Finding—Intent—2024 c 339). These statutes are currently effective until January 1, 2035. “Mercury-containing lights” are defined as lamps, bulbs, tubes, or other devices that contain mercury and provide functional illumination in homes, businesses, and outdoor stationary fixtures. [Id. at 70A.505.020\(11\)](#). Note: it is likely that most Decathlon products will be exempt because they are not for illumination in homes, businesses or stationary outdoor fixtures. If applicable, the product stewardship program must include arranging for the collection, transportation, recycling, processing, and final disposition of unwanted mercury-containing lights. [Id. at 70A.505.040\(5\)](#). Producers must inform the Washington Department of Ecology of their participation in the product stewardship program. [Id. at 70A.505.030](#).

Producers or retailers of mercury-containing lights in scope of the law must collect an environmental handling charge for purchase of all mercury-containing lights sold. [Id. at 70A.505.050](#). There are two choices for compliance here: (1) producers charge the fee to retailers, and retailers charge the fee to consumers, but the producer remits the fee to the stewardship organization, or (2) retailers collect the fee directly from the consumers and pay on behalf of the product’s producer to the stewardship organization.

Labelling

What are the mandatory labellings to put on the product or on the packaging regarding the environmental rules ?

None.

Technical rules / Standards

General safety requirements

What are the general safety requirements ? Does a risk assessment have to be conducted ? If yes, does it concern specific risk ?

Federal Law:

Electric Cap Lamp Regulations. The Mine Safety and Health Administration regulates electric cap lamps used in mines. [30 C.F.R. § 19](#). These requirements likely do not apply to Decathlon products, but may be informative. The Mine Safety and Health Administration (MSHA) considers the materials used in a lamp, the construction of a lamp, the weight of the lamp, the amount of light, the distribution of light, and the exclusion of dust from the headpiece when considering approving the design of a lamp. [30 C.F.R. § 19.6](#). The MSHA also considers the angle of the light beam and the visual and photometric light distribution when approving a lamp. Id. MSHA requires safety standards to protect against explosion hazard which are detailed at [30 C.F.R. § 19.7](#).

Voluntary Standards. There are several voluntary standards applicable to different types of lights and lamps:

- [UL 8750](#) is a voluntary standard for Light Emitting Diode (LED) Equipment for Use in Lighting Products.
- [UL 783](#) is a voluntary standard for Electric Flashlights and Lanterns for Use in Hazardous (Classified) Locations.
- [UL 153](#) is a voluntary standard which applies to most portable (non-fixed) lighting products typically found in homes for Portable Electric Luminaires

While not mandatory, UL standards are widely recognized and failing to follow them might create heightened liability if a product covered by these standards malfunctioned in some way.

Mandatory or voluntary standards

Are there some mandatory or voluntary standards applicable ? If yes, which ones ?

Please indicate the reference of the applicable standards

For all federal and state requirements applicable to batteries please see the Batteries card.

Federal Law:

FCC Regulations for Radio Frequency Devices. For any electronic products in this category that qualify as “intentional radiators” as defined in the Definitions section, please see the “Electronic Equipment with Bluetooth” card for relevant requirements. For electronic products in this category that qualify as “unintentional radiators” as defined in the Definitions section, please see the “Sun Charger/Electrical Charger” card.

Voluntary Standards/Certifications. There are many voluntary standards that apply to products that contain electrical and battery components. These standards include those issued by UL, ANSI, ASTM, and IEEE, among others. While complying with these voluntary standards is expensive and not mandatory to sell products in the U.S. market, meeting at least one applicable voluntary safety standard is the norm and is important to ensure product safety and minimize liability if a product covered by these standards malfunctions in some way.

[UL voluntary standards](#) are particularly important for wall-powered and battery-powered devices, as UL standards are generally expected for products on the U.S. market. Depending on the product and safety standard, some CE standards may be equivalent to UL or other standards. Decathlon may want to consult with an experienced testing lab regarding its electronic and battery-powered products to see if other qualifications they have, such as CE mark, cover the same areas as the UL standard applicable to that product.

One way product manufacturers can certify that a product complies with a voluntary standard is by working with a Nationally Recognized Testing Laboratory (NRTL). NRTLs are designated by the U.S. Occupational Safety and Health Administration (OSHA), which regulates certain equipment found in workplaces. OSHA's regulations are generally not applicable to the sale of consumer products; however, NRTLs have become the standard for consumer product safety certification. There are

nearly twenty different NRTLs recognized by OSHA, a list of which can be found [here](#). Each NRTL has their own registered certification mark that may accompany a product that has been tested and certified for a certain standard by that NRTL. Note that UL is both a NRTL and a standard author. Other NRTLs, apart from UL, can certify that a product meets a UL standard. However, the mark on the product will be that of the NRTL, not of UL. To obtain a UL mark, the product must be tested by UL itself.

Maine Law:

Maine Law (Mercury-Added Lamps). Manufacturers of mercury-added lamps must implement a department-approved recycling program. [38 M.R.S. § 1672\(4\)](#). Retailers are prohibited from selling mercury-added lamps produced by a manufacturer who does not comply with a department-approved recycling program. [Id. at § 1672\(4\)](#). The department must notify retailers of manufacturers who are not in compliance with this section. *Id.* Commencing on January 1, 2026, a person may not offer for sale, sell or distribute as a new manufactured product a compact fluorescent mercury-added lamp or a linear fluorescent mercury-added lamp. [Id. at § 1672\(4-A\)](#).

Physical and mechanicals properties

What are the physical and mechanicals properties required ?

Federal Law:

FCC Regulations for Radio Frequency Devices. For any electronic products in this category that qualify as “intentional radiators” as defined in the Definitions section, please see the “Electronic Equipment with Bluetooth” card for relevant requirements. For electronic products in this category that qualify as “unintentional radiators” as defined in the Definitions section, please see the “Sun Charger/Electrical Charger” card for relevant requirements.

Electrical aspects

What are requirements regarding electrical aspects ?

Federal Law:

None identified.

Voluntary Standards. There is a voluntary standard related to protection provided by enclosures of electrical equipment, including resistance to water intrusion. See [IEC 60529](#) Degree of Protection Provided by Enclosures.

Inflammability

Are there any specific requirements to ensure inflammability?

None identified.

Hygiene

What are the rules regarding hygiene ?

None identified.

Radioactivity

What are the rules regarding radioactivity ?

None identified.

Radiofrequency (2G,3G,4G,5G, Bluetooth, Ant+, GPS, Wifi...)

What are the rules regarding the radiofrequency?

Products making noise

What are the requirements regarding products making noise ?

None identified.

Chemicals substances

What are the requirements regarding chemicals substances ? Which ones are forbidden ? Limited ? Do we have to clearly indicate all substances that are in the product, or is the indication of major substances enough?"

See Chemical Substances Attachment.

For all federal and state requirements applicable to batteries please see the Batteries card.

Packaging requirements

Can you please indicate if there are some requirements regarding the packaging of our products (mainly they are in paper, carton, plastic, textile) ? If yes, please explain them.

See Packaging Requirements Attachment.

Laboratory

In which laboratory can we perform the testing of the product according to the standard?

Federal Law:

FCC Regulations for Radio Frequency Devices. For any electronic products in this category that qualify as "intentional radiators", please see the Electronic Equipment with Bluetooth card for relevant requirements. For electronic products in this category that qualify as "unintentional radiators", please see the Sun Charger/Electrical Charger card.

California Law:

California Law (Proposition 65). Proposition 65 does not require testing, however, if a company is aware that a listed chemical is present and wishes to determine that a warning label is not required (e.g., to justify a decision not to provide a warning), testing may be conducted at any outside laboratory that is familiar with Proposition 65.

Sanctions / Fines

What are the sanctions / fines in case of non conformity ?

For penalties associated with packaging violations, please see the Packaging Technical Requirements section above.

For all federal and state requirements applicable to batteries please see the Batteries card.

Federal Law:

FCC Regulations for Radio Frequency Devices. For any electronic products in this category that qualify as “intentional radiators” as defined in the Definitions section, please see the “Electronic Equipment with Bluetooth” card for relevant sanctions information. For electronic products in this category that qualify as “unintentional radiators” as defined in the Definitions section, please see the “Sun Charger/Electrical Charger” card for relevant sanctions information.

California Law:

California Law (Proposition 65). Any person who violates Proposition 65 by failing to provide a required warning regarding exposure to Proposition 65 listed chemicals may be liable for a civil penalty of up to \$2,500 per day for each violation. [Cal. Health & Safety Code § 25249.7](#). In practice, Proposition 65 cases are typically settled with an average settlement amount in the \$50,000 range plus an agreement to either reformulate or provide Proposition 65 warnings for the product.

Illinois Law:

Illinois Law (Flame Retardants). A person who manufactures or distributes products containing more than 0.001% of pentaBDE or octaBDE is subject to a fine between \$10,000 and \$25,000 for each violation. [410 Ill. Comp. Stat. 48](#).

Maine Law (Toxic Chemicals). Violators may be subject to a \$2,500 - \$25,000 criminal penalty for each day of the violation, except the minimum amount for knowing violations is \$5,000 for each day of the violation. Violators may be subject to a \$100 - \$10,000 civil penalty for each day of the violation or, if the violation relates to hazardous waste, of not more than \$25,000 for each day of the violation. [38 M.R.S. § 349](#).

Maine Law (Lead). This section may be enforced in a civil action brought by the Attorney General under the Maine Unfair Trade Practices Act, except that the following penalties apply or violations of the Maine Lead Law:

- For the first violation by a manufacturer a warning must be given instead of an enforcement by the Attorney General if the employer has the equivalent of 25 or fewer full-time, year-round employees.

- For all other violations the following provisions apply as penalties for violations of this section.

- For the first violation of this section, the penalty is not more than \$100 per children's product manufactured, sold, distributed or offered for sale or distribution, with the total penalty not to exceed \$5,000.
- For a 2nd violation of this section, the penalty is not more than \$500 per children's product manufactured, sold, distributed or offered for sale or distribution, with the total penalty not to exceed \$25,000.
- For a 3rd or subsequent violation of this section, the penalty is not more than \$1,000 per children's product manufactured, sold, distributed or offered for sale or distribution, with the total penalty not to exceed \$50,000.

A penalty under this section may be waived by the court if it is determined that the person in good faith and with due diligence attempted to comply with the requirements of this section and promptly corrected after discovery any noncompliance with this section. [252 M.R.S. 1316-A](#).

Massachusetts Law:

Massachusetts Law (Lead). A person who applies lead-based paint or glaze to a covered product or sells such a product is subject to a fine between \$100 and \$500 for each violation. [M.G.L. c.111, § 196](#), [105 CMR 460](#). Each article to which a lead-based substance is applied constitutes a separate violation. A person who willfully applies a lead-based substance to a toy or sells such a toy is subject to imprisonment for up to three months for each violation. In addition, any article of personal property in violation of the lead-based substance law may be embargoed by the Massachusetts Department of Environmental Protection.

Massachusetts Law (Banned Hazardous Substances). Violators are subject to a fine between \$100 and \$500 and/or imprisonment up to 90 days on the first offense and on subsequent offenses, subject to imprisonment for up to 1 year and/or a fine between \$600 and \$3,000. [M.G.L. c.94B, § 4](#). When an authorized inspector has probable cause to believe that a product is a banned hazardous substance, he must mark the substance as banned and give notice to the manufacturer, the distributor, and the owner of the product. [M.G.L. c.94B, § 5](#). He must also embargo the product. The manufacturer, distributor, or owner may remove the product from public display but may not remove it from the premises. The product will be considered a banned hazardous substance until the proceedings are complete. If the court finds that the embargoed article is banned, the article will be destroyed at the expense of the manufacturer, distributor, or owner under supervision of the inspector, and all court costs and fees and storage expenses will be taxed against the manufacturer, distributor or owner.

New York Law:

New York Law (Flame Retardants). Violation of New York's law regarding brominated flame retardants is a misdemeanor; each product made, sold or offered for sale is a separate violation. [NY Env't Conserv. L. § 37-0111\(5\)](#).

Washington Law:

Washington Law (PBDE Ban). The Department of Ecology may issue a warning letter to a manufacturer that produces, sells, or distributes prohibited products (i.e., products containing the banned PBDEs). [R.C.W. § 70A.405.100](#). If compliance is not achieved one year after the warning letter is sent, the Department of Ecology may assess civil penalties of up to \$1,000/violation for a first offense and up to \$5,000 for each repeat offense. In addition, a manufacturer that knowingly produces, sells, or distributes prohibited products must recall the product and reimburse the retailer or any other purchaser for the product and any applicable shipping and handling for returning the products.

Certifications / Registrations

Certifications or registrations

Are there some certifications or registrations applicable to the product ?

For all federal and state requirements applicable to batteries please see the Batteries card.

Federal Law:

FCC Regulations for Radio Frequency Devices. For any electronic products in this category that qualify as “intentional radiators” as defined in the Definitions section, please see the “Electronic Equipment with Bluetooth” card for relevant requirements. For electronic products in this category that qualify as “unintentional radiators” as defined in the Definitions section, please see the “Sun Charger/Electrical Charger” card for relevant requirements.

Massachusetts Law:

Massachusetts Law (Mercury Added Products). No mercury-added product shall be offered for final sale or use or distributed in the Commonwealth of Massachusetts without notification in writing by the manufacturer of the product to the department through IMERC within 30 days of the product's release in accordance with this section. [M.G.L. c.21H, § 6B](#).

Voluntary Standards/Certifications. There are many voluntary standards that apply to products that contain electrical and battery components. These standards include those issued by UL, ANSI, ASTM, and IEEE, among others. While complying with these voluntary standards is expensive and not mandatory to sell products in the U.S. market, meeting at least one applicable voluntary safety standard is the norm and is important to ensure product safety and minimize liability if a product covered by these standards malfunctions in some way.

[UL voluntary standards](#) are particularly important for wall-powered and battery-powered devices, as UL standards are generally expected for products on the U.S. market. Depending on the product and safety standard, some CE standards may be equivalent to UL or other standards. Decathlon may want to consult with an experienced testing lab regarding its electronic and battery-powered products to see if other qualifications they have, such as CE mark, cover the same areas as the UL standard applicable to that product.

One way product manufacturers can certify that a product complies with a voluntary standard is by working with a Nationally Recognized Testing Laboratory (NRTL). NRTLs are designated by the U.S. Occupational Safety and Health Administration (OSHA), which regulates certain equipment found in workplaces. OSHA's regulations are generally not applicable to the sale of consumer products; however, NRTLs have become the standard for consumer product safety certification. There are nearly twenty different NRTLs recognized by OSHA, a list of which can be found [here](#). Each NRTL has their own registered certification mark that may accompany a product that has been tested and certified for a certain standard by that NRTL. Note that UL is both a NRTL and a standard author. Other NRTLs, apart from UL, can certify that a product meets a UL standard. However, the mark on the product will be that of the NRTL, not of UL. To obtain a UL mark, the product must be tested by UL itself.

Laboratory

[In case of mandatory certification/ registration that we must follow please precise the name and address of any laboratories where we can conduct them](#)

For all federal and state requirements applicable to batteries please see the Batteries card.

Federal Law:

FCC Regulations for Radio Frequency Devices. For any electronic products in this category that qualify as “intentional radiators” as defined in the Definitions section, please see the “Electronic Equipment with Bluetooth” card for relevant information. For electronic products in this category that qualify as “unintentional radiators” as defined in the Definitions section, please see the “Sun Charger/Electrical Charger” card for relevant information.

Importation rules

[General rules](#)

[What are the general rules in order to import the product ?](#)

See Importation Attachment.

[Documents](#)

[What are the required documents ?](#)

Federal Law:

Entry Documents (for U.S. Imports generally). Within 15 calendar days of the date that a shipment arrives at a U.S. port of entry, entry documents must be filed at a location specified by the port director. These documents are:

- Entry Manifest (CBP Form 7533) or Application and Special Permit for Immediate Delivery (CBP Form 3461) or other form of merchandise release required by the port director,

- Evidence of right to make entry,
- Commercial invoice or a pro forma invoice when the commercial invoice cannot be produced,
- Packing lists, if appropriate,
- Other documents necessary to determine merchandise admissibility.
- If the goods are to be released from CBP custody at the time of entry, an entry summary for consumption must be filed and estimated duties deposited at the port of entry within 10 working days of the goods' entry

See U.S. CBP, Importing into the United States, 12, 35-37 (2006), (available at: <http://www.cbp.gov/sites/default/files/documents/Importing%20into%20the%20U.S.pdf>).

Also see section on Conformity Documents.

Time period

In which time period may we obtain the right to import ?

None specified. But see tips for new importers and exporters at <http://www.cbp.gov/trade/basic-import-export/importer-exporter-tips>

Administration

What is the administration in charge of importations ? Name and address ?

U.S. Customs & Border Protection

OPA/CBP INFO Center

1300 Pennsylvania Avenue N.W., MS: 1345

Washington, DC 20229

United States of America

Comments

Comments

Depending on the battery chemistry, lanterns may be subject to the U.S. Department of Transportation's Hazardous Materials Regulations ("HMR") transportation requirements.

For all federal and state requirements applicable to batteries please see the Batteries card.

Inspection of the product

Inspection method

Does it exist an inspection procedure applicable to the product ? If yes, which administration is in charge of ? Can you please describe the procedure ?

U.S. CBP inspects imports generally.

Federal Law:

FCC Regulations for Radio Frequency Devices. For any electronic products in this category that qualify as “intentional radiators” as defined in the Definitions section, please see the “Electronic Equipment with Bluetooth” card for relevant provisions. For electronic products in this category that qualify as “unintentional radiators” as defined in the Definitions section, please see the “Sun Charger/Electrical Charger” card for relevant provisions.

Commercialization rules

Notification / Declaration

What are the general rules in order to comercialize a product ?
Is there a notification / declaration to do ?

Federal Law:

FCC Regulations for Radio Frequency Devices. For any electronic products in this category that qualify as “intentional radiators” as defined in the Definitions section, please see the “Electronic Equipment with Bluetooth” card for relevant provisions. For electronic products in this category that qualify as “unintentional radiators” as defined in the Definitions section, please see the “Sun Charger/Electrical Charger” card for relevant provisions.

Documents

What are the required documents ?

Federal Law:

FCC Regulations for Radio Frequency Devices. For any electronic products in this category that qualify as “intentional radiators” as defined in the Definitions section, please see the “Electronic Equipment with Bluetooth” card for relevant provisions. For electronic products in this category that qualify as “unintentional radiators” as defined in the Definitions section, please see the “Sun Charger/Electrical Charger” card for relevant provisions.

Delay

What is the delay to obtain the right to commercialize ?

None identified.

Display in store

Is there some specific rules on the way to display the product in store ?

Massachusetts Law:

Massachusetts Law (Fluorescent Lamps). (MANDATORY ONLY FOR MANUFACTURERS). One who sells fluorescent lamps at retail may post the following notice in 24-point type or larger and in a manner clearly visible to a consumer examining fluorescent lamps offered for sale: "Fluorescent bulbs save energy and reduce environmental pollution. Note: Fluorescent bulbs contain a small amount of mercury and must be properly recycled at the end of their use. Contact your municipality or

for bulb recycling options.” [M.G.L. 21H, § 6J\(d\)\(2\)](#).

A retailer may include additional language in the notice in order to promote the sale or in-store recycling of fluorescent lamps, provided that the notice language set forth in this subsection is present. A manufacturer, individually or collectively, must provide a printed copy of that notice, free of charge, at the request of any retailer of mercury-added lamps for its retail establishment in Massachusetts. These laws do not apply to mercury-added button cell batteries; mercury-added formulated products intended to be totally consumed in use, such as reagents, cosmetics, pharmaceuticals and other laboratory chemicals; or products where the only mercury contained in the product comes from a removable mercury-added button cell battery or a mercury-added lamp. Note: this requirement likely only applies for stationary fluorescent lamps of the type you would install in a building.

Display on internet

Is there some specific mentions to display the product on internet ?

None identified.

Information to consumers

Do some specific information to have be given to consumers when the product is placed on the market ?

Federal Law:

FCC Regulations for Radio Frequency Devices. For any electronic products in this category that qualify as “intentional radiators” as defined in the Definitions section, please see the “Electronic Equipment with Bluetooth” card for relevant provisions. For electronic products in this category that qualify as “unintentional radiators” as defined in the Definitions section, please see the “Sun Charger/Electrical Charger” card for relevant provisions.
