EUROPE

Product's definition

Category

In which category the product is classified ?

The product is classified in the following categories :

- "Light Means of Transport battery (LMT)"
- "Portable batteries"

Definition

What is the exact definition of the product ?

And if it exists, what is the interpretation of the authorities regarding it ?

- "battery" means any device delivering electrical energy generated by direct conversion of chemical energy, having internal or external storage, and consisting of one or more non-rechargeable or rechargeable battery cells, modules or of packs of them, and includes a battery that has been subject to preparation for re-use, preparation for repurposing, repurposing or remanufacturing

- "portable battery" means a battery that is sealed, weighs 5 kg or less, is not designed specifically for industrial use and is neither an electric vehicle battery, an LMT battery, nor an SLI battery;

- "portable battery of general use" means a portable battery, whether or not rechargeable, that is specifically designed to be interoperable and that has one of the following common formats 4,5 Volts (3R12), button cell, D, C, AA, AAA, AAAA, A23, 9 Volts (PP3)

- "light means of transport battery" or "LMT battery" means a battery that is sealed, weighs 25 kg or less and is specifically designed to provide electric power for the traction of wheeled vehicles that can be powered by an electric motor alone or by a combination of motor and human power, including type-approved vehicles of category L within the meaning of Regulation (EU) No 168/2013 of the European Parliament and of the Council, and that is not an electric vehicle battery

- "non-rechargeable battery" means a battery that is not designed to be electrically recharged

- "rechargeable battery" means a battery that is designed to be electrically recharged

Comments

Labelling

Language

In which language must the information on the product or on the packaging be indicated? If English is sufficient please indicate NA.

The labelling must be translated in every language of each retail country.

Mandatory labelling on product

What are the mandatory labelling on the product ?

Every battery, accumulator must be marked with the The "crossed-out bin" :

This symbol means that this product and the batteries it contains must not be disposed of in household waste. They must be separated and recycled specially. Take the batteries and unusable electronic products to an authorised collection area for recycling. Recycling your electronic waste in this way will protect the environment and your health.

This symbol must be noticeable, legible and indelible. It shall cover at least 3% of the surface of the largest side of the battery or accumulator without exceeding the dimensions of 5 cm x 5 cm. And for cylindrical elements, it shall cover at least 1,5% of the surface of the battery without exceeding the dimensions of 5cm x 5cm. If the size of the battery, accumulator or assembly in battery is such that the surface of the symbol would be less than 0,5 cm x 0,5 cm, marking of the battery, accumulator or Battery assembly is not required but a symbol of minus 1 cm x 1 cm is printed on the packaging.

2. Batteries, accumulators and button cells containing more than 0,0005 % mercury, more than 0,002 % cadmium or more than 0,004 % lead are prohibited. The product under these limits shall be marked with the chemical symbol for the metal concerned: Hg, Cd or Pb. This chemical symbol shall be printed under the previous symbol and covers an area equal at least 25% of the latter symbol.

3. And the capacity of the battery or the accumulator must be noticeable, legible and indelible

This pictogram means that the company participates in a system for waste recovery.

New Regulation :

- For rechargeable portable batteries, LMT batteries :

- From 18 August 2025, all batteries shall be marked with the symbol for separate collection of batteries ('separate collection symbol') as shown in Part B of Annex VI. The separate collection symbol shall cover at least 3 % of the area of the largest side of the battery up to a maximum size of 5 x 5 cm. In the case of cylindrical battery cells, the separate collection symbol shall cover at least 1,5 % of the surface area of the battery and shall have a maximum size of 5 x 5 cm.

- From 18 August 2026 or 18 months after the date of entry into force of the implementing act referred to in paragraph 10, whichever is the latest :

- Batteries shall bear a label containing the general information on batteries set out in Part A of Annex VI.
- Rechargeable portable batteries, LMT batteries shall bear a label containing information on their capacity.

- Non-rechargeable portable batteries shall bear a label containing information on their minimum average duration when used in specific applications and a label indicating 'non-rechargeable'.

- From 18 February 2027, all batteries shall be marked with a QR code as described in Part C of Annex VI. The QR code shall provide access to the following:

(a) for LMT batteries, industrial batteries with a capacity greater than 2kWh and electric vehicles batteries, the battery passport in accordance with Article 77

(b) for other batteries, the applicable information referred to in paragraphs 1 to 5 of this Article, the declaration of conformity referred to in Article 18, the report referred to in Article 52(3) and the information regarding the prevention and management of waste batteries laid down in Article 74(1), points (a) to (f)

- The labels and the QR code referred to in paragraphs 1 to 6 shall be printed or engraved visibly, legibly and indelibly on the battery.

- The CE marking shall be affixed visibly, legibly and indelibly to the battery. Where that is not possible or not warranted due to the nature of the battery, it shall be affixed to the packaging and to the documents accompanying the battery.

- Importers/ Distributors / Manufacturers shall indicate on the battery their name, registered trade name or registered trade mark, their postal address, indicating a single contact point, and, if available, web and email address. Where that is not possible, the required information shall be provided on the packaging or in a document accompanying the battery.

- Manufacturers shall ensure that batteries which they place on the market bear a model identification and batch or serial number, or product number or another element allowing their identification. Where the size or nature of the battery does not allow it, the required information shall be provided on the packaging or in a document accompanying the battery.

- All batteries containing more than 0,002 % cadmium or more than 0,004 % lead, shall be marked with the chemical symbol for the metal concerned: Cd or Pb.

- The relevant chemical symbol indicating the heavy metal content shall be printed beneath the separate collection symbol and shall cover an area of at least one-quarter the size of that symbol.)

- Batteries that have been subject to preparation for re-use, preparation for repurposing, repurposing or remanufacturing shall bear new labels or shall be marked with markings in accordance with this Article, and containing information on their change of status in accordance with point 4 of Annex XIII, which shall be accessible through the QR code.

- For portable batteries : Batteries in portable devices must be easily removable by end-users using commonly available tools, without requiring specialized tools, unless safety or performance reasons justify otherwise (Art. 11 EU Reg 2023/1542).

- For LMT batteries : a carbon footprint declaration shall be drawn up for each battery model per manufacturing plant, please refer to the environment part.

Regulation (EU) 2023/988 about General Product Safety

Manufacturers shall indicate:

- their name, company name or registered trademark,
- postal (4 Boulevard de Mons, 59650, Villeneuve-D'Ascq) and electronic address (csr.decathlon.com/product-safety)

If, due to the size of the product, it is not possible to indicate all this information, it will be necessary to indicate it on the packaging and instructions.

Mandatory labelling on packaging

What are the mandatory labelling on the packaging ?

1. If the dimensions of the equipment do not permit the following pictogram, it should be indicated on the packaging and on the warranty documents and instructions for use that accompany it.

The "crossed-out bin" symbol means that this product and the batteries it contains must not be disposed of in household waste. They must be separated and recycled specially. Take the batteries and unusable electronic products to an authorised collection area for recycling. Recycling your electronic waste in this way will protect the environment and your health.

The previous sentence that explain the signification of the pictogram is not compulsory on the packaging if the product has a notice, otherwise the sentence must written under the symbol so as so explain the meaning.

2. Batteries, accumulators and button cells containing more than 0,0005 % mercury, more than 0,002 % cadmium or more than 0,004 % lead are prohibited. The product under these limits shall be marked with the chemical symbol for the metal concerned: Hg, Cd or Pb. This chemical symbol shall be printed under the previous symbol and covers an area equal at least 25% of the latter symbol.

3. And the capacity of the battery or the accumulator must be noticeable, legible and indelible

And the capacity of the battery or the accumulator.

4. This pictogram means that the company participates in a system for waste recovery.

New Regulation :

- From 18 August 2025, all batteries shall be marked with the symbol for separate collection of batteries ('separate collection symbol') as shown in Part B of Annex VI. Where the size of the battery is such that the separate collection symbol would be smaller than $0,47 \times 0,47$ cm, the battery does not need to be marked with that symbol. Instead, a separate collection symbol measuring at least 1×1 cm shall be printed on the packaging.

- Where this is not possible or not warranted on account of the nature and size of the battery, the labels and the QR code shall be affixed to the packaging and to the documents accompanying the battery.

- Importers/ Distributors/ Manufacturers shall indicate on the battery their name, registered trade name or registered trade mark, their postal address, indicating a single contact point, and, if available, web and email address. Where that is not possible, the required information shall be provided on the packaging or in a document accompanying the battery.

- The CE marking shall be affixed visibly, legibly and indelibly to the battery. Where that is not possible or not warranted due to the nature of the battery, it shall be affixed to the packaging and to the documents accompanying the battery

- Manufacturers shall ensure that batteries which they place on the market bear a model identification and batch or serial number, or product number or another element allowing their identification. Where the size or nature of the battery does not allow it, the required information shall be provided on the packaging or in a document accompanying the battery.

Packaging must display: separate collection symbol (if battery $<0.5\text{cm}^2$), CE marking, capacity information, safety warnings per IEC standards, recycling information, and QR code access details from Feb 2027 (EU Reg 2023/1542 Art. 13-14).

Manufacturers shall indicate:

- their name, company name or registered trademark,
- postal (4 Boulevard de Mons, 59650, Villeneuve-D'Ascq) and electronic address (csr.decathlon.com/product-safety)

The rest of the information to be included in the packaging is available [here](#)

Mandatory labelling on the instructions manual

What are the mandatory labelling on the instructions manual (if one is required) ?
In which format, do we have to deliver the instruction manual to our customers ?

1. If the dimensions of the equipment do not permit the The "crossed-out bin", it should be indicated on the packaging and on the warranty documents and instructions for use that accompany it.

The "crossed-out bin" symbol means that this product and the batteries it contains must not be disposed of in household waste. They must be separated and recycled specially. Take the batteries and unusable electronic products to an authorised collection area for recycling. Recycling your electronic waste in this way will protect the environment and your health.

The previous sentence that explain the signification of the pictogram is not compulsory on the packaging if the product has a notice, otherwise the sentence must written under the symbol so as so explain the meaning.

2. Batteries, accumulators and button cells containing more than 0,0005 % mercury, more than 0,002 % cadmium or more than 0,004 % lead are prohibited. The product under these limits shall be marked with the chemical symbol for the metal concerned: Hg, Cd or Pb. This chemical symbol shall be printed under the previous symbol and covers an area equal at least 25% of the latter symbol.

3. And the capacity of the battery or the accumulator must be noticeable, legible and indelible

And the capacity of the battery or the accumulator.

4. This pictogram means that the company participates in a system for waste recovery.

New Regulation :

- Any natural or legal person that places on the market products incorporating portable batteries shall ensure that those products are accompanied with instructions and safety information on the use, removal and replacement of the batteries. Those instructions and that safety information shall be made available permanently online, on a publicly available website, in an easily understandable way for end-users.

- Before placing a battery on the market, importers/distributors/Manufacturers shall verify that :

- the battery is accompanied by the documents required pursuant to Articles 6 to 10 and Articles 12, 13 and 14 and by instructions and safety information in a language or languages which can be easily understood by end-users, as determined by the Member State in which the battery is to be made available on the market

- Economic operators placing on the market or putting into service batteries that have been subject to preparation for re-use, preparation for repurposing, repurposing or remanufacturing shall ensure that the examination, performance testing, packing

and shipment of those batteries, and of such batteries' components subject to any of those operations, is carried out following adequate quality control and safety instructions.

- In addition to the information referred to in Article 8a(2) of Directive 2008/98/EC, producers or, where appointed in accordance with Article 57(1), producer responsibility organisations shall make available to end-users and distributors the following information regarding the prevention and management of waste batteries with regard to the categories of batteries that they supply within the territory of a Member State:

- The necessary safety instructions to handle waste batteries, including in relation to the risks associated with, and the handling of, batteries containing lithium;

Instructions must include: safe handling procedures, charging requirements, storage conditions, disposal instructions, safety warnings per IEC 61960-4:2024, emergency procedures, and battery access info via QR code.

Warnings - General ones

Are general warnings required ? If yes, which ones ?

Required warnings: Do not short-circuit, avoid extreme temperatures, use correct charger, do not disassemble, keep away from children, fire/explosion hazard, proper ventilation during charging.

Warnings - Specific ones

Are specific warnings required ? If yes which ones ?

Specific warnings based on application: For portable electronics - overheating risks, charging supervision required. For LMT batteries - weight limits, mounting restrictions. Chemical hazard symbols for Hg>0.0005%, Cd>0.002%, Pb>0.004% (EU Reg 2023/1542 Art. 13).

Target Age

Is there any target age applicable? If so, does it have to be indicated and in which form?

NA

Sanctions / Fines

What are the sanctions / fines in case of non conformity ?

New Regulation :

By 18 August 2025 Member States shall lay down the rules on penalties applicable to infringements of this Regulation and shall take all measures necessary to ensure that they are implemented. The penalties provided for shall be effective, proportionate and dissuasive. Member States shall, without delay, notify the Commission of those rules and of those measures and shall notify it, without delay, of any subsequent amendment affecting them.

Environment

Recycling - Eco taxes

Which regulations concerning ecodesign and recycling apply to this product? Are there any ecotaxes applicable to this category of product?

There is an eco tax for WEEE and batteries: the symbol indicating separate collection for EEE consists of the crossed-out wheeled bin, as shown below. The symbol must be printed visibly, legibly and indelibly.

Collection targets: 65% by 2025, 70% by 2030. Recycling rates: Li 65%, Co 95%, Ni 95%, Cu 95%. Producer responsibility for collection costs. Extended Producer Responsibility scheme participation mandatory

Labelling

What are the mandatory labellings to put on the product or on the packaging regarding the environmental rules ?

- For LMT batteries : a carbon footprint declaration shall be drawn up for each battery model per manufacturing plant, in accordance with the implementing act referred to in the fourth subparagraph and containing, at least, the following information:

- (a) administrative information about the manufacturer;
- (b) information about the battery model
- (c) information about the geographic location of the battery manufacturing plant
- (d) the carbon footprint of the battery, calculated as kg of carbon dioxide equivalent per one kWh of the total energy provided by the battery over its expected service life
- (e) the carbon footprint of the battery differentiated according to life cycle stage as described in point 4 of Annex II
- (f) the identification number of the EU declaration of conformity of the battery
- (g) a web link giving access to a public version of the study supporting the carbon footprint values referred to in points (d) and (e).

- The carbon footprint declaration shall apply from:

18 August 2028 or 18 months after the date of entry into force either of the delegated act or of the implementing act respectively referred to in the fourth subparagraph, points (a) and (b), whichever is the latest, for LMT batteries

The Commission shall, by 18 February 2027 for LMT batteries adopt:

(a) a delegated act in accordance with Article 89 to supplement this Regulation by establishing the methodology for the calculation and verification of the carbon footprint of the battery referred to in the first subparagraph, point

(d), in accordance with the essential elements set out in Annex II; (b) an implementing act establishing the format for the carbon footprint declaration referred to in the first subparagraph. That implementing act shall be adopted in accordance with the examination procedure referred to in Article 90(3)

Battery environmental labelling under EU Battery Regulation 2023/1542: QR code mandatory from 18 Feb 2027 (Art. 13), carbon footprint declaration for batteries >2kWh (Art. 7), due diligence information (Art. 48). Recycled content labelling required.

Technical rules / Standards

General safety requirements

What are the general safety requirements ? Does a risk assessment have to be conducted ? If yes, does it concern specific risk ?

This Directive defines the General Safety Requirements.

Producers shall be obliged to place only safe products on the market. A product shall be deemed safe, as far as the aspects covered by the relevant national legislation are concerned, when, in the absence of specific Community provisions governing the safety of the product in question, it conforms to the specific rules of national law of the Member State in whose territory the product is marketed, such rules being drawn up in conformity with the Treaty and laying down the health and safety requirements which the product must satisfy in order to be marketed.

New regulation :

- Batteries shall only be placed on the market or put into service if they meet the following requirements:

(a) the sustainability and safety requirements laid down in Articles 6 to 10 and 12

- Any natural or legal person that places on the market products incorporating LMT batteries shall ensure that those batteries, as well as individual battery cells included in the battery pack, are readily removable and replaceable by an independent professional at any time during the lifetime of the product.

- Any natural or legal person that places on the market products incorporating portable batteries shall ensure that those batteries are readily removable and replaceable by the end-user at any time during the lifetime of the product. That obligation shall only apply to entire batteries and not to individual cells or other parts included in such batteries

- Risk assessment : For the safety of electric vehicle batteries and starting, lighting and ignition batteries (SLI batteries), the continued validity of the EU type-approval for vehicles of categories M, N and O in accordance with Regulation (EU) 2018/858 of the European Parliament and of the Council (6) requires that any battery which has been repaired or exchanged continues to comply with the applicable safety requirements. Where safety particulars have changed, further inspections or tests are required to verify continued compliance with the requirements upon which the existing EU type-approval has been based.

Regulation (EU) 2023/988 about General Product Safety

Before placing a product on the market, the manufacturers must carry out an internal risk analysis to be included in the technical documentation. Where products are subject to specific safety requirements imposed by Union law, this obligation applies only to those aspects and risks or categories of risks which are not covered by those requirements.

Applicable for all new model codes placed on the European market from 13 December 2024.

You could find more information and the template to the internal risk analysis in the Quality website [HERE](#)

Battery safety under Battery Regulation 2023/1542 Art. 6-10: safety requirements, performance tests, thermal runaway protection. IEC 62133 series mandatory. Transport safety UN38.3. Fire/explosion prevention measures required per DGCCRF guidelines.

Mandatory or voluntary standards

Are there some mandatory or voluntary standards applicable ? If yes, which ones ?

Please indicate the reference of the applicable standards

New Regulation :

- The QR code and the unique identifier shall comply with the ISO/IEC standards 15459-1:2014, 15459-2:2015, 15459-3:2014, 15459-4:2014, 15459-5:2014 and 15459-6:2014 or their equivalent.

- Please refer to harmonised standards mentioned in the article 15 of this regulation.

- A specific standard is being written under TC21X-WG5

Mandatory: IEC 62133-2:2017 (Li-ion safety), IEC 61960-4:2024 (portable Li batteries). EN 50604-1 (appliance batteries). UN38.3 transport. Voluntary: IEC 61951 series (Ni-MH), IEC 60086 (primary batteries). CE marking per Battery Regulation.

Physical and mechanicals properties

What are the physical and mechanicals properties required ?

ESPR REGULATION

The Ecodesign for Sustainable Products Regulation (ESPR) entered into force on 18 July 2024 to significantly improve the circularity, energy performance, and other environmental sustainability aspects of products placed on the EU market.

It replaces the Ecodesign Directive 2009/125/EC and enables the setting of performance and information conditions – known as ‘ecodesign requirements’ – for almost all categories of physical goods (with some exceptions, such as food and feed). Please note that it is a framework legislation, meaning concrete product rules will be decided progressively over time, on a product-by-product basis, or horizontally, on the basis of groups of products with similar characteristics. For more information, please consult the website of the European Commission [here](#) and the applicable delegated acts.

Electrical aspects

What are requirements regarding electrical aspects ?

NA

Inflammability

Are there any specific requirements to ensure inflammability?

NA

Hygiene

What are the rules regarding hygiene ?

NA

Radioactivity

What are the rules regarding radioactivity ?

NA

Radiofrequency (2G,3G,4G,5G, Bluetooth, Ant+, GPS, Wifi...)

What are the rules regarding the radiofrequency?

Products making noise

What are the requirements regarding products making noise ?

NA

Chemicals substances

What are the requirements regarding chemicals substances ? Which ones are forbidden ? Limited ? Do we have to clearly indicate all substances that are in the product, or is the indication of major substances enough?"

The directive 2006/66/EC forbids that battery or accumulator be put on the market if it contains more than 0,0005 % mercury by weight, more than 0,002 % cadmium by weight or more than 0,004 % lead by weight.

New Regulation :

- All batteries containing more than 0,002 % cadmium or more than 0,004 % lead, shall be marked with the chemical symbol for the metal concerned: Cd or Pb.

- The relevant chemical symbol indicating the heavy metal content shall be printed beneath the separate collection symbol and shall cover an area of at least one-quarter the size of that symbol.)

Battery Regulation 2023/1542 Art. 6: mercury <5ppm, cadmium <20ppm, lead <40ppm. REACH compliance required. Hazardous substances restrictions per Annex I. Due diligence for cobalt, lithium, nickel, natural graphite (Art. 45-50). CMR substances prohibited.

For all products:

INFORMATION REGARDING CHEMICAL SUBSTANCES

The products shall comply with all applicable regulations in the EU, including REACH regulation (notably annexes XIV and XVII) and CLP regulation regarding the limitation and/or ban of specific substances.

The products shall, when applicable, comply with specific bans set out by EU regulations (eg. PFHxA, lead, bisphenols, ...). Please refer to the chemical regulations file (link [HERE](#)) mapping all applicable regulations in the EU, as well as substances of very high concern.

The products shall comply with our internal commitments, formalized in our [Chemical Management Policy](#), including the general and/or categorical restricted substances lists. Please ensure the supplier of these products has duly signed the aforementioned documents before production.

For more information about chemical test to be done, please refer to the [General Guidelines for Testing](#).

Packaging requirements

Can you please indicate if there are some requirements regarding the packaging of our products (mainly they are in paper, carton, plastic, textile) ? If yes, please explain them.

NA

Laboratory

In which laboratory can we perform the testing of the product according to the standard?

You have to conduct a self certification proceedings so as to obtain a test report that respect the threshold fixed in the Regulation.

Sanctions / Fines

What are the sanctions / fines in case of non conformity ?

By 18 August 2025 Member States shall lay down the rules on penalties applicable to infringements of this Regulation and shall take all measures necessary to ensure that they are implemented. The penalties provided for shall be effective, proportionate and dissuasive. Member States shall, without delay, notify the Commission of those rules and of those measures and shall notify it, without delay, of any subsequent amendment affecting them.

Testing per IEC 62133 series, UN38.3 transport tests, capacity/performance per IEC 61960-4:2024. Accredited labs required for conformity assessment. EASA approval needed for aviation applications. Tests: safety, performance, environmental, EMC if applicable.

Certifications / Registrations

Certifications or registrations

Are there some certifications or registrations applicable to the product ?

Each producer shall be registered.

Registration is subject to the same requirements procedural steps in each Member State

New Regulation :

- For the purposes of complying with Article 30(1)(d) and (e) of Regulation (EU) 2022/2065, providers of online platforms falling within the scope of Section 4 of Chapter III of that Regulation which enable consumers to conclude distance contracts with producers shall obtain the following information from producers offering batteries, including batteries incorporated in appliances, means of light transport or other vehicles, to consumers in the Union:

- (a) details concerning the register of producers referred to in Article 55 and the producer's registration number or registration numbers in that register
- (b) a self-certification by the producer committing to only offer batteries, including those incorporated in appliances, light means of transport or other vehicles, with regard to which the extended producer responsibility requirements referred to in Article 56(1), (2), (3) and (4), Article 57(1) and Article 58(1), (2) and (7) are complied with.

Laboratory

In case of mandatory certification/ registration that we must follow please precise the name and address of any laboratories where we can conduct them

NA

NA

Conformity documents

Documents

What are the conformity documents ? Can you please list them ?

- A certificate of conformity with the following mentions (Annex IX) :

1. Battery model (product, category, and batch or serial number).
2. Name and address of the manufacturer and, where applicable, its authorised representative.
3. This declaration of conformity is issued under the sole responsibility of the manufacturer.
4. Object of the declaration (description of the battery and identification allowing traceability, and which may, where appropriate, include an image of the battery)
5. The object of the declaration described in point 4 is in conformity with the relevant Union harmonisation legislation: ... (reference to the other Union acts applied).
6. References to the relevant harmonised standards or the common specifications used or references to the other technical specifications in relation to which conformity is declared
7. The notified body ... (name, address, number) ... performed ... (description of intervention) ... and issued the certificate(s): ... (details, including its date, and, where appropriate, information on the duration of and conditions for its validity).
8. Additional information Signed for and on behalf of: (place and date of issue): (name, function) (signature)

-To ensure effective access to information for market surveillance purposes, to adapt to new technologies and to ensure resilience in case of global crises, such as the Covid-19 pandemic, it should be possible to provide information online regarding conformity with all Union acts applicable to batteries in the form of a single EU declaration of conformity.

- The manufacturer shall draw up an EU declaration of conformity in accordance with Article 18 for each battery and keep it at the disposal of the national authorities for 10 years after the battery has been placed on the market. The EU declaration of conformity shall identify the battery for which it has been drawn up.

Required: EU Declaration of Conformity per Article 18 of Regulation (EU) 2023/1542, technical documentation per Annex VIII, test reports for capacity/performance claims, and waste management documentation per Article 74 for battery recycling obligations.

Format

Does it exist a specific format for the conformity documents ? If yes, can you please provide us an example in english ?

Importation rules

General rules

What are the general rules in order to import the product ?

These product could be considered as dangerous good for the transportation.

LUNA :

- It is necessary to ensure that batteries from third countries entering the Union market comply with the requirements of this Regulation, and with other applicable Union law, whether imported on their own or incorporated into or added to products, and, in particular, that appropriate conformity assessment procedures have been carried out by manufacturers with regard to those batteries. Provision should therefore be made for importers to make sure that the batteries they place on the market and put into service comply with the requirements of this Regulation and that the CE marking on batteries and documentation drawn up by manufacturers are available for inspection by the national authorities, whether imported as new or used batteries or batteries that have been subject to preparation for re-use, preparation for repurposing, repurposing or remanufacturing.

- Before placing a battery on the market, importers shall verify that:

- (a) the EU declaration of conformity and technical documentation referred to in Annex VIII have been drawn up and that the relevant conformity assessment procedure referred to in Article 17 has been carried out by the manufacturer
- (b) the battery bears the CE marking referred to in Article 19, and is marked and labelled in accordance with Article 13
- (c) the battery is accompanied by the documents required pursuant to Articles 6 to 10 and Articles 12, 13 and 14 and by instructions and safety information in a language or languages which can be easily understood by end-users, as determined by the Member State in which the battery is to be made available on the market; and
- (d) the manufacturer has complied with the requirements laid down in Article 38(6) and (7).

- Importers shall indicate on the battery their name, registered trade name or registered trade mark, their postal address, indicating a single contact point, and, if available, web and email address.

Regulation (EU) 2023/988 about General Product Safety

When a product is imported from a country outside the EU (invoiced from a country outside the EU), Decathlon assumes the following obligations as importer:

- Obligation to ensure that the product is compliant (Technical documentation including Risk analysis and legal marking).
- Identification of Decathlon as importer on the legal marking of the product.
- Immediately inform the manufacturer of a dangerous product and check the information available on Safety Business Gateway.

Documents

What are the required documents ?

Commercialization rules

Notification / Declaration

What are the general rules in order to comercialize a product ?
Is there a notification / declaration to do ?

DEFORESTATION REGULATION

The regulation fighting deforestation and forest degradation (RDUE - text available [here](#)) requires operators wishing to place on the EU market or export from the EU wood, rubber, cattle, coffee, cocoa, palm oil and soy or products based on these materials to file a due diligence declaration.

In order to file this declaration, operators need to collect geolocation of extraction / production plots and the date or period of extraction, prove that the product is 0 deforestation and comply with local regulations (human rights, environment, etc.).

In order to know if you're concerned by this regulation, please check your HS Code ([Annex 1](#)) and/or contact the product conformity team.

Display in store

Is there some specific rules on the way to display the product in store ?

In France , since 2006, the stores have the obligation (Decree 2005-829 of 20 July 2005 on the composition of electrical and electronic equipment and the disposal of waste from this equipment) to take back the waste of electrical equipment and consumer electronics (WEEE) when purchasing new appliances of the same type.

Display on internet

Is there some specific mentions to display the product on internet ?

Regulation (EU) 2023/988 about General Product Safety

Any operator must guarantee that any warning or information concerning safety which must be affixed to the product or to the packaging or to appear in an accompanying document will be available online.

Online sales: battery information per Art. 13 Battery Regulation - capacity, chemistry, lifespan. QR code link from Feb 2027. Separate collection symbol display. Environmental information. French AGECE: recyclability score, repair info when applicable.

AGECE INFORMATION

In addition to prohibiting a product or packaging that carries the mentions “biodegradable” or “environmentally friendly”, Article 13 of the French AGECE law provides for an obligation to inform consumers about specific environmental qualities and characteristics of some products and their packaging (described in Article L541-9-1 of the French Code of Environment - available [here](#)). The Decree 2022-748 (published on April 29, 2022 - available [here](#)) and supplemented by an official FAQ (latest version published in October 2023 - available [here](#)), specifies the scope of this obligation. It lists the requirements per type of concerned item, and provides that all the information must be available in a digital format for 2 years after the last unit of the product concerned is placed on the market, accessible without charge at the time of purchase, and reusable in a way that allows aggregation.

Information to consumers

Do some specific information to have be given to consumers when the product is placed on the market ?

Consumer info per Battery Regulation Art. 74: separate collection, recycling points, environmental impact. Capacity/lifespan info (Art. 13). Safety instructions mandatory. Collection system participation info. Removability/replaceability instructions when applicable.

Comments

Comments

Battery products must display capacity information visibly at point of sale. For rechargeable batteries, capacity must be clearly indicated on packaging/display materials per Regulation (EU) 2023/1542.
