Product's definition

Category

In which category the product is classified ?

ELECTRONIC / MEASURING DEVICES - Electronic equipment : Cardio frequency measure, stop watch, compass, disposable cameras (with and without flash), fitness console, pedometer, altimeter, watches, and other equipment containing electronic parts.

Definition

What is the exact definition of the product ?

And if it exists, what is the interpretation of the authorities regarding it ?

Per Decathlon's request, this card covers multiple potential products.

Federal Law:

FCC regulations for radio frequency devices

Intentional Radiators. Some electronic products will be considered an "intentional radiator" under Federal Communication Commission ("FCC") rules. Intentional radiators are defined as any "device that intentionally generates and emits radio frequency energy by radiation or induction." [47 C.F.R. § 15.3\(o\)](#). According to [FCC guidance](#), this includes products that contain Bluetooth or WiFi connectivity. It does not appear that the products in this category will be considered "intentional radiators," but in the event that Decathlon sells a product that appears to come within this definition, please see the Electronic equipment using Bluetooth card for further information on regulations applicable to intentional radiators. Note that where that card refers to Bluetooth specifically, it is equally applicable to all other "intentional radiators" as defined above.

Unintentional Radiators. If an electronic product is not considered an "intentional radiator," it will very likely be considered an "unintentional radiator." An unintentional radiator is defined as "a device that intentionally generates radio frequency energy [Electromagnetic energy at any frequency in the radio spectrum between 9 kHz and 3,000,000 MHz] for use within the device, or that sends radio frequency signals by conduction to associated equipment via connecting wiring, but which is not intended to emit RF energy by radiation or induction." [47 C.F.R. § 15.3\(z\)](#). According to [FCC guidance](#), the majority of modern electronic products that are not considered "intentional radiators" will be regulated as "unintentional radiators." For requirements applicable to unintentional radiators, please see the relevant provisions in the Sun Charger, Electrical Charger, USB Charger card.

Federal Law (Battery Charging Systems): The U.S. Department of Energy has certain energy efficiency requirements for Battery Charging Systems, defined as "a device that charges batteries for consumer products, including battery chargers embedded in other consumer products." To the extent the products in this category are used to charge batteries, they will be

considered "battery chargers." [10 C.F.R. § 430.2](#) See the Sun Charger, Electrical Charger, USB Charger card for additional information on this line of requirements.

FCC Voluntary Labeling Program: The FCC has established a voluntary labeling program for wireless consumer Internet of Things (IoT) products. The FCC's definition of an IoT device is: (1) an internet-connected device capable of intentionally emitting RF energy that has at least one transducer (sensor or actuator) for interacting directly with the physical world, coupled with (2) at least one network interface (e.g., Wi-Fi, Bluetooth) for interfacing with the digital world. 47 CFR 8.203(i). Some of Decathlon's products may be eligible for the voluntary labeling program. 47 CFR 8.205. Applicants for the voluntary labeling program must submit their products for testing and certify in their application that the applicant has taken every reasonable measure to create a securable product. 47 CFR 8.208. If the application is accepted, the FCC will allow the product to use the Cyber Trust Mark. 47 CFR 8.209.

California (Batteries and CEC Battery Charging System): Some of the products in this category may include a regulated "battery charging system" (BCS). BCS are defined under California law as "all rechargeable batteries or devices incorporating a rechargeable battery and the chargers used with them." [20 Cal. Code Regs. §1602](#). Please see the Sun Charger, Electrical Charger, USB Charger card for potentially applicable definitions and information re federal preemption of certain CA Appliance Efficiency requirements.

Some of the products in this category may also include batteries. Please see the Batteries card for relevant federal and state definitions.

Massachusetts Law (mercury-added products): No person may sell or distribute a mercury-added product in Massachusetts unless the manufacturer has created and filed with the Massachusetts Department of Environmental Protection a collection plan for end-of-life mercury-added products, including a manufacturer take-back system or a recycling plan, the requirements of which are detailed in the regulations ([MGL 21H, 310 CMR 75](#)). A "mercury-added product" is a product to which the manufacturer intentionally introduces mercury, including, but not limited to, electric lamps, thermostats, automotive devices, electric switches, medical or scientific instruments, electric relays or other electrical devices. Every manufacturer of mercury-added products sold in Massachusetts is financially responsible for the collection and recycling systems and must pay an annual registration fee. These laws do not apply to mercury-added button cell batteries; mercury-added formulated products intended to be totally consumed in use, such as reagents, cosmetics, pharmaceuticals and other laboratory chemicals; or products where the only mercury contained in the product comes from a removable mercury-added button cell battery or a mercury-added lamp.

New York Law (mercury-added products): A "mercury-added consumer product" is "any device or material into which elemental mercury or mercury compounds are intentionally added during such device's or material's formulation or manufacture, and in which the continued presence of mercury is required to provide a specific characteristic, appearance or quality, or to perform a specific function. Such term shall include, but not be limited to mercury-containing: . . . (b) thermometers . . . (d) medical or scientific instruments; (e) electrical relays and other electrical devices; (f) lamps; and (g) batteries sold to consumers, not including button batteries." ([Environmental Conservation Law § 27-2101](#)).

+++

State Electronic Waste Recycling Laws: Several states, including California, Illinois, New Jersey, New York, Texas, and Washington have electronics takeback laws that apply to certain classes of electronic devices. Decathlon products covered by this card would not necessarily fall within regulated electronics categories, but the definitions for covered categories are provided below to confirm status. If a product does fall within one of the definitions below, please see the Sun Charger, Electrical Charger, USB Charger card for additional details on the requirements.

California Law (electronics restrictions and takeback): California requires that an advance recovery fee be collected from consumers at the point of sale of covered electronic devices in the state. Other requirements, including manufacturer registration and fees, and product labeling with manufacturer and brand also apply. Based on our understanding of Decathlon's products in this category, these will all be excluded from California's law because they do not meet the CED definition provided below.

Under the California law, "covered electronic device" (CED) is an electronic device that is covered by the Electronic Waste Recycling Act. The law defines a CED as a "a video display device containing a screen greater than 4 inches, measured diagonally, that is identified in the regulations adopted by" DTSC. Any video display device with a screen greater than four inches in size that fits into one of the following categories is a CED:

1. Cathode ray tube containing devices (CRT devices)
2. Cathode ray tubes (CRTs)

3. Computer monitors containing cathode ray tubes
4. Laptop computers with liquid crystal display (LCD)
5. LCD containing desktop monitors
6. Televisions containing cathode ray tubes
7. Televisions containing liquid crystal display (LCD) screens
8. Plasma televisions
9. Portable DVD players with LCD screens

See [CalRecycle Electronic Waste Recycling](#) page and <https://www.calrecycle.ca.gov/Electronics/Manufacturer/> for additional details. Note that material restrictions (RoHS-like restrictions) also apply to CEDs, restricting heavy metal content. See <https://dtsc.ca.gov/covered-electronic-devices/> for additional information.

Illinois Law (electronics takeback): Illinois has takeback requirements for the following categories of covered electronic devices:

- Computers and small-scale servers;
- Computer monitors;
- Televisions;
- Printers, facsimile machines and scanners;
- Digital video disc players, digital video disc records and videocassette recorders;
- Video game consoles;
- Digital converter boxes, cable receivers and satellite receivers; and
- Electronic keyboards, electronic mice and portable digital music players that have memory capability and are battery powered.

Manufacturer requirements, including registration, fees, reporting, and takeback, are summarized here: <https://epa.illinois.gov/topics/waste-management/materials-management/electronics-recycling1/manufacturers.html>

Illinois (electronics recycling): "Covered electronic device" or "CED" means any computer, computer monitor, television, printer, electronic keyboard, facsimile machine, videocassette recorder, portable digital music player that has memory capability and is battery powered, digital video disc player, video game console, electronic mouse, scanner, digital converter box, cable receiver, satellite receiver, digital video disc recorder, or small-scale server sold at retail. 415 ILCS 151. Note that this law is repealed on December 31, 2026. 415 ILCS 151/1-90. Manufacturers of CEDs must register and operate a manufacturer program either individually or as part of the manufacturer clearinghouse as required in the Consumer Electronics Recycling Act. 415 ILCS 151/1-30(e). The manufacturer's name must also be permanently affixed to, and readily visible on, the CED. 415 ILCS 151/1-30(f).

Each manufacturer who sells CEDs in the State must register with the Agency by: (i) submitting to the Agency a \$5,000 registration fee; and (ii) completing and submitting to the Agency the registration form prescribed by the Agency. Information on the registration form shall include, without limitation, all of the following:

(1) a list of all of the brands and labels under which the manufacturer's CEDs are sold or offered for sale in the State; and

(2) the total weights, by CED category, of CEDs sold in the United States to individuals, under any of the manufacturer's brands or labels, during the calendar year that is 2 years before the applicable program year. 415 ILCS 151/1-30(a).

Maine (electronic waste recycling):

"Covered electronic device" means a desktop printer, a video game console, a cathode ray tube, a cathode ray tube device, a flat panel display or similar video display device with a screen that is greater than 4 inches measured diagonally and that contains one or more circuit boards. "Covered electronic device" does not include an automobile; a household appliance; a large piece of commercial or industrial equipment, such as commercial medical equipment, that contains a cathode ray tube, a cathode ray tube device, a flat panel display or similar video display device that is contained within, and is not separate from, the larger piece of equipment; other medical devices as that term is defined under the Federal Food, Drug, and Cosmetic Act; or a cellular telephone subject to section 2143. ME Stat. Tit. 38, §1610(2)(C).

D. Covered electronic device manufacturers are subject to the requirements of this paragraph.

(1) Manufacturers shall pay the reasonable operational costs of the consolidator attributable to the handling of all covered electronic devices received at consolidation facilities in this State, the transportation costs from the consolidation facility to a licensed recycling and dismantling facility and the costs of recycling. "Reasonable operational costs" includes the costs associated with ensuring that consolidation facilities are geographically located to conveniently serve all areas of the State as determined by the department. The recycling of each type of covered electronic device must be funded by allocating the cost of the program among the manufacturers selling covered electronic devices in the State on a basis proportional to the manufacturer's national market share of the type of covered electronic device. The department shall annually determine each manufacturer's recycling share based on readily available national market share data. If the department determines that a manufacturer's market share is less than 1/10 of 1%, the department may determine that market share de minimus. A manufacturer whose market share is determined de minimus by the department is not responsible for payment of a pro rata share for the corresponding billing year. The total market shares determined de minimus by the department must be proportionally allocated to and paid for by the manufacturers that have 1/10 of 1% or more of the market of each type of covered electronic device.

(2) Each manufacturer shall work cooperatively with consolidators to ensure implementation of a practical and feasible financing system. Within 90 days of receipt of an invoice, a manufacturer shall reimburse a consolidator for allowable costs incurred by that consolidator.

[ME Stat. Tit. 38, §1610\(5\).](#)

Manufacturer Responsibilities and Resources

According to Maine's Department of Environmental Protection website, "Maine's E-Waste Law sets up an Extended Producer Responsibility system to facilitate the recycling of Covered Electronic Devices from Covered Entities. The definition of Covered Electronic Devices (CED) includes televisions, portable DVD players, game consoles, computer monitors, laptops, tablets, e-readers, 3D printers, desktop and portable printers, digital picture frames, and other visual display devices with screens of at least 4 inches measured diagonally and one or more circuit boards. Covered Entities are households, NGOs with 100 or fewer employees, k-12 schools, and businesses with 100 or fewer employees, so products designed for use by businesses are included in the law.

Maine law requires three things of CED manufacturers (defined as the brand owner or, if the brand owner has no U.S. presence, the first U.S. importer of the device):

1. affix a permanent label to each device identifying the manufacturer;
2. register annually and pay an annual registration fee; and
3. pay for recycling costs associated with their products.

Registrations: Manufacturers must register with Maine DEP before offering a CED for sale in or into Maine; if companies are selling online or into the U.S., a CED could be sold or resold into Maine. Companies must re-register by April 1 each year thereafter. Annual registration includes the reporting of total national sales data: all sales of covered products, regardless of where in the US they were sold or who bought them. Registration fees are either \$3000, \$750, or \$0 depending on a manufacturer's market share. Register by filling out our [registration form](#) (PDF) and returning it to Maine DEP. Manufacturers can also fill out the optional [credit form](#), which could result in lower recycling costs (see recycling costs discussion below). We also accept registrations via the [ERCC portal](#) (off-site), which streamlines registration in multiple states.

Recycling: The Maine program uses state [approved consolidators](#) (PDF) to collect, sort, and, often, recycle electronics, so manufacturers are not required to make these arrangements.

Recycling costs: Recycling is billed according to a manufacturer's current market share of a particular product type. All manufacturers with more than 0.1% national market share for a product type are given a [recycling share](#) (PDF) based on their market share. The approved consolidators bill manufacturers according to each manufacturer's assigned recycling share at a rate approved by the Department which accounts for geographic differences in collection sites served. Manufacturers can lower their recycling shares by selling EPEAT certified electronics or running their own takeback programs." Maine [Department of Environmental Protection website](#).

Maine (cathode ray tube disposal): Beginning 9 months after the department adopts rules pursuant to section 1610, subsection 5, paragraph D, subparagraph (1), a person may not dispose of a cathode ray tube in a solid waste disposal facility. This subsection may not be construed to affect existing laws, rules or regulations governing disposal of cathode ray tubes in effect prior to the adoption of rules pursuant to section 1610, subsection 5, paragraph D, subparagraph (1). [ME Stat. Tit 38, §1306\(4\)](#).

Massachusetts (cathode ray tube disposal):

Broken cathode ray tubes (CRTs) and processed CRT glass undergoing recycling must be managed in compliance with [310 CMR 30.104\(3\)\(h\)](#).

New Jersey (electronics recycling): [For purposes of New Jersey's laws pertaining to electronic equipment recycling, "covered electronic device" is defined to include "a desktop or personal computer, computer monitor, portable computer, or television sold to a consumer." \(N.J.S.A. § 13:1E-99.95\)](#). To qualify as computers or televisions, the device must have a screen greater than four inches when measured diagonally. It does not appear that any products in this category meet this definition, hence the recycling, registration, reporting and labeling requirements of the NY law should not apply to these products. (See [N.J.S.A. § 13:1E-99.94 et seq.](#)). Electronics Manufacturers (either individually or as part of a group) are required to submit Collection Plans each year for the Department's review and approval. Generally, Collection Plans are required to be submitted by June 1 to describe the Manufacturer's (or group's) collection of electronics waste for the following calendar year (Example: 2014 Collection Plans are due June 1, 2013). These Plans are now required to be submitted electronically via NJDEP Online. [REQUIRED CONTENT OF A COLLECTION PLAN](#). A manufacturer that chooses to submit a collection plan as part of a group shall, at least 20 days prior to the submittal of each group collection plan, participate in the preparation and submission to the Department of a Group Designation Form. [GROUP DESIGNATION FORM](#)

The collection obligation for manufacturers of covered electronic devices (other than televisions) is the total weight of covered electronic devices that a manufacturer is responsible to collect, transport and recycle each program year. See [here](#) for a posting of annual collection obligations.

New York (electronics recycling): New York's electronic waste program applies to the following:

- Computers (including laptops, desktops, tablets and e-readers)
- Televisions
- Cathode ray tubes
- Computer peripherals (including any cable, cord, or wiring accompanying the computer peripheral.)
- - Monitors
 - Electronic keyboards
 - Electronic mice or similar pointing devices
 - Facsimile machines, document scanners, and printers (only those intended for use with a computer and weighing less than 100 lbs.)
- Small electronic equipment (including any cable, cord, or wiring accompanying the small electronic equipment.)
- - VCRs
 - Digital video recorders (DVRs)
 - Portable digital music players
 - DVD players (including projectors with DVD player capabilities intended for home-use)
 - Digital converter boxes
 - Cable or satellite receivers (including digital media receivers)
 - Electronic or video game consoles (including both handheld devices and those intended for use with a video display device)
- Small scale servers

Under the NY law, "covered electronic equipment" does not include: any motor vehicle or any part thereof; camera or video camera; portable or stationary radio; household appliances such as clothes washers, clothes dryers, refrigerators, freezers, microwave ovens, ovens, ranges or dishwashers; equipment that is functionally or physically part of a larger piece of equipment intended for use in an industrial, research and development or commercial setting; security or anti-terrorism equipment; monitoring and control instrument or system; thermostat; hand-held transceiver; telephone of any type; portable digital assistant or similar device; calculator; global positioning system (GPS) receiver or similar navigation device; a server other than a small-scale server; a cash register or retail self checkout system; a stand-alone storage product intended for use in industrial, research and development or commercial settings; commercial medical equipment that contains within it a cathode ray tube, a flat panel display or similar video display device, and is not separate from the larger piece of equipment; or other medical devices as that term is defined under the Federal Food, Drug and Cosmetic Act. [N.Y. Env't Conserv. § 27-2601](#).

Additional information on the NY law, including registration, reporting, marking covered devices with manufacturer name, and fees, is available at <http://www.dec.ny.gov/chemical/66845.html>. Manufacturers may meet their take back obligations through individual or collective electronic waste acceptance programs. Described in more detail below are requirements for:

- [manufacturers participating in an individual electronic waste acceptance program](#)
- [manufacturers participating in a collective electronic waste acceptance program](#)

Also available to manufacturers of CEE are answers to some of the most [frequently asked questions](#) regarding the [Act](#).

The program has several steps, including one time manufacturer registration (see certifications/registration portion of this card); submission of an electronic waste acceptance program plan that meets the requirements of the [Act](#); and submission of an annual report form; annual reporting fee; and recycling surcharge (if applicable). The annual reporting fee is \$3,000 and annual reports are due by March 1st of each year for the previous year. See this [guidance page](#) for additional information.

Texas (electronic waste): The Texas law is limited to televisions and computers.

See https://www.tceq.texas.gov/p2/recycle/electronics/tv_recycling.html, <https://www.tceq.texas.gov/p2/recycle/electronics/television-recycling-program-manufacturer-guidance> and <https://www.tceq.texas.gov/p2/recycle/electronics/computer-recycling.html> for additional information. For purposes of Texas's laws pertaining to electronic equipment recycling, "computer equipment" means a "desktop or notebook computer and includes a computer monitor or other display device that does not contain a tuner." ([Tex. Health & Safety Code Ann. § 361.952](#)).

Texas requires "television and computer-equipment manufacturers to offer recycling opportunities to consumers for these electronics." [Texas Electronics Recycling](#) webpage; Texas Admin Code, [Tit. 30, Rule § 328.131](#).

Manufacturer Responsibilities

(a) Before a manufacturer may offer computer equipment for sale in this state, the manufacturer shall:

(1) adopt and implement a recovery plan; and

(2) affix a permanent, readily visible label to the computer equipment with the manufacturer's brand(s).

(b) The recovery plan must enable a consumer to recycle computer equipment without paying a separate fee at the time of recycling and must include provisions for:

(1) the manufacturer's collection from a consumer of any used computer equipment labeled with the manufacturer's brand(s);

(2) recycling or reuse of computer equipment collected under paragraph (1) of this subsection, including information for the consumer on how and where to return the computer equipment labeled with the manufacturer's brand(s). This information must include, at a minimum, an Internet link that consumers can access to find out specifically how and where to return the computer equipment labeled with the manufacturer's brand(s). If the Internet link is going to change, the manufacturer shall notify the commission of what the new Internet link will be 30 days in advance; and

(3) collection of computer equipment that is:

(A) reasonably convenient and available to consumers in this state; and

(B) designed to meet the collection needs of consumers in this state.

(c) Examples of collection methods that alone or combined meet the convenience requirements of this section follow. These are merely examples, meaning that other collection methods not mentioned, alone or combined, may meet the convenience requirements of this section:

(1) a system by which the manufacturer or the manufacturer's designee offers the consumer a system for returning computer equipment by mail, without the consumer having to pay any mailing, shipping, handling, or any other cost directly related to mailing;

(2) a system using a physical collection site that the manufacturer or the manufacturer's designee keeps open and staffed and to which the consumer may return computer equipment; and

(3) a system using a collection event held by the manufacturer or the manufacturer's designee at which the consumer may return computer equipment.

(d) Collection services under this section may use existing collection and consolidation infrastructure for handling computer equipment and may include electronic recyclers and repair shops, recyclers of other commodities, reuse organizations, not-for-profit corporations, retailers, recyclers, and other suitable operations. Other suitable operations include, but are not limited to, local governments.

(e) The manufacturer:

(1) shall include collection, recycling, and reuse information on the manufacturer's publicly available Internet site, including a list of all of the manufacturer's brands both in use and no longer in use;

(2) shall provide to the commission a recovery plan in accordance with subsection (b) of this section and notification that the manufacturer has, or will have by September 1, 2008, a compliant collection program. In order to be eligible for the September 1, 2008 commission's list of manufacturers that have recovery plans and have notified the commission that they have a compliant collection program, a manufacturer must submit its recovery plan and notification no later than July 1, 2008; and

(3) may include collection, recycling, and reuse information in the packaging or in other materials that accompany the manufacturer's computer equipment when the equipment is sold.

(f) Information about collection, recycling, and reuse on a manufacturer's publicly available Internet site does not constitute a determination by the commission that the manufacturer's recovery plan or actual practices are in compliance with this subchapter or other law.

(g) Each manufacturer that has submitted a recovery plan shall submit an annual recycling report to the commission by January 31, 2010, or by January 31 of each year after submitting a recovery plan, that includes:

(1) the weight of computer equipment collected, recycled, and reused during the preceding calendar year; and

(2) documentation verifying the collection, recycling, and reuse of that computer equipment in a manner that complies with §328.149 of this title (relating to Sound Environmental Management) and with §305.128 of this title (relating to Signatories to Reports). The certification required by §305.128(c) of this title must also state either at the beginning or end, "I, {name}, certify under penalty of law that all computer equipment collected by {company name} under 30 TAC Chapter 328, Subchapter I, has been recycled or reused in a manner that complies with federal, state, and local law."

(h) If more than one person is a manufacturer of a certain brand of computer equipment as defined by §328.135 of this title (relating to Definitions), any of those persons may assume responsibility for and satisfy the obligations of a manufacturer under this subchapter for that brand. If none of those persons assumes responsibility or satisfies the obligations of a manufacturer for the computer equipment of that brand, the commission may consider any of those persons to be the responsible manufacturer for purposes of this subchapter.

(i) The obligations under this subchapter of a manufacturer who manufactures or manufactured computer equipment, or sells or sold computer equipment manufactured by others, under a brand that was previously used by a different person in the manufacture of the computer equipment, extend to all computer equipment bearing that brand regardless of its date of manufacture.

Washington (electronic waste): Washington requires manufacturers of TVs, computers, monitors, laptops, tablets, and/or P-DVD players to participate in the E-Cycle Washington product stewardship program. Manufacturers must be listed on the [Manufacturer Registration list](#), register annually with the state, pay an annual administrative fee, and participate in a recycling plan in order to sell in or into Washington. Covered products must also be permanently labeled with the manufacturer's brand (name or logo identifying an electronic product in the consumer marketplace and attributing the electronic product to a manufacturer). WAC [173-900-210](#); WAC [173-900-030](#). See <https://ecology.wa.gov/Regulations-Permits/Guidance-technical-assistance/Electronics-Ecycle-guidance-and-reports/Manufacturers> for additional information.

Manufacturers of CEPs must register with the Department of Ecology before sale of CEPs begin in Washington and must also annually update their registration. Manufacturers must also label CEPs with manufacturer information and pay an administrative fee as determined by Ecology. In addition, manufacturers must participate in a recycling plan, as dictated by the relevant laws and regulations cited above. Retailers must ensure that the manufacturer of its products is on the registration list and that the product is labeled with the manufacturer's brand name.

Labelling

Language

In which language must the information on the product or on the packaging be indicated? If English is sufficient please indicate NA.

English

Mandatory labelling on product

What are the mandatory labelling on the product ?

Federal Law:

All products are required to comply with country of origin marking regulations. See [19 U.S.C. § 1304](#); [19 CFR § 134.11](#); and importation section of this conformity card.

Note that (mechanical) watches are subject to special country-of-origin marking requirements. Specifically, watch movements are required to be marked on one or more of the bridges or top plates to show:

1. The name of the country of manufacture,
2. The name of the manufacturer or purchaser, and
3. In words, the number of jewels, if any, serving a mechanical purpose as frictional bearings.

Watch cases shall be marked on the inside or outside of the back cover to show:

- (1) the name of the country of manufacture, and
- (2) the name of the manufacturer or purchaser.

The term “watch movement” refers to devices regulated by a balance wheel and hairspring, quartz crystal, or any other system capable of determining intervals of time, with a display or system to which a mechanical display can be incorporated. “Watch movements” include devices that do not exceed 12 mm in thickness and 50 mm in width, length, or diameter.

The term “cases” includes inner and outer cases, containers, and housings for movements, together with parts or pieces, such as, but not limited to, rings, feet, posts, bases, and outer frames, and any auxiliary or incidental features, which (with appropriate movements) serve to complete the watches, clocks, time switches, and other apparatus provided for in Chapter 91, HTSUS.

Articles required to be marked in accordance with the special marking requirements must be conspicuously and indelibly marked by cutting, die-sinking, engraving, stamping, or mold marking. Articles required to be so marked shall be denied entry unless marked in exact conformity with these requirements.

Note: Movements with opto-electronic display only and cases designed for use therewith, whether entered as separate articles or as components of assembled watches or clocks, are not subject to the special marking requirements.

In addition to the special marking requirements set forth above, all watches of foreign origin must comply with the usual country of origin marking requirements outlined in [19 U.S.C. § 1304](#). CBP considers the country of origin of watches to be the country of manufacture of the watch movement. The name of this country should appear either on the outside back cover or on the face of the dial. See <http://www.cbp.gov/sites/default/files/documents/Importing%20into%20the%20U.S.pdf> at pp. 102-103.

FCC Voluntary Labeling Program: The FCC has established a voluntary labeling program for wireless consumer Internet of Things (IoT) products. The FCC's definition of an IoT device is: (1) an internet-connected device capable of intentionally emitting RF energy that has at least one transducer (sensor or actuator) for interacting directly with the physical world, coupled with (2) at least one network interface (e.g., Wi-Fi, Bluetooth) for interfacing with the digital world. 47 CFR 8.203(i). Some of Decathlon's products may be eligible for the voluntary labeling program. 47 CFR 8.205. Applicants for the voluntary labeling program must submit their products for testing and certify in their application that the applicant has taken every reasonable measure to create a securable product. 47 CFR 8.208. If the application is accepted, the FCC will allow the product to use the Cyber Trust Mark. 47 CFR 8.209.

Voluntary Labeling: Water Resistant is a common mark stamped on the back of wrist watches to indicate how well a watch is sealed against the ingress of water. It is usually accompanied by an indication of the static test pressure that a sample of newly manufactured watches were exposed to in a leakage test. The test pressure can be indicated either directly in units of pressure such as bar, atmospheres, or (more commonly) as an equivalent water depth in meters or feet. The International Organization for Standardization (ISO) issued a standard for water-resistant watches, ISO 2281:1990. This standard was designed for watches intended for ordinary daily use and are resistant to water during exercises such as swimming for a short period. A separate standard, ISO 6425, applies to diving watches.

FCC regulations for radio frequency devices

For any electronic products in this category that qualify as “intentional radiators” as defined in the Definitions section, please see the “Electronic Equipment with Bluetooth” card for relevant requirements. For electronic products in this category that qualify as “unintentional radiators” as defined in the Definitions section, please see the “Sun Charger, Electrical Charger, USB Charger” card.

Batteries: See the Batteries card for further information on federal and state regulations applicable to some batteries and battery charging systems.

Maine:

Manufacturer label required. Beginning January 1, 2005, a manufacturer may not offer for sale in this State a covered electronic device unless a visible, permanent label clearly identifying the manufacturer of that device is affixed to it. [ME Stat. Tit. 38, §1610\(4\)](#).

C. "Covered electronic device" means a desktop printer, a video game console, a cathode ray tube, a cathode ray tube device, a flat panel display or similar video display device with a screen that is greater than 4 inches measured diagonally and that contains one or more circuit boards. "Covered electronic device" does not include an automobile; a household appliance; a large piece of commercial or industrial equipment, such as commercial medical equipment, that contains a cathode ray tube, a cathode ray tube device, a flat panel display or similar video display device that is contained within, and is not separate from, the larger piece of equipment; other medical devices as that term is defined under the Federal Food, Drug, and Cosmetic Act; or a cellular telephone subject to section 2143. [ME Stat. Tit. 38, §1610\(2\)\(C\)](#).

Massachusetts Law (mercury-added products): No one may sell a mercury-added product unless the product is labeled by the manufacturer as follows ([MGL 21H, 310 CMR 75](#)). A “mercury-added product” is a product to which the manufacturer intentionally introduces mercury, including, but not limited to, electric lamps, thermostats, automotive devices, electric switches, medical or scientific instruments, electric relays or other electrical devices.

The label must clearly inform the purchaser that mercury is present in the product and that the product shall be reused, recycled or properly disposed of as hazardous waste. The label must be constructed of materials that are sufficiently durable to remain legible for the useful life of the product. Manufacturers of products that contain an irremovable mercury-containing lamp used for backlighting shall meet the product labeling requirements of this section by placing the label on the product or its care and use manual. These laws do not apply to the labeling of those products whose only mercury component is a removable mercury-added lamp or button cell battery.

Before a mercury-added product is sold in Massachusetts, the manufacturer must 1) submit a compliant labeling plan to the Massachusetts Department of Environmental Protection, or 2) label the product in compliance with a labeling plan approved by another state that is a member of the Interstate Mercury Education and Reduction Clearinghouse.

Where labels on the product or product packaging are not clearly visible and legible to prospective purchasers and product users prior to purchase, (e.g., in sales transactions that occur over the internet, telephone or postal service), the manufacturer or retailer must clearly inform the purchaser 1) that the product contains mercury and shall clearly specify that the mercury-added product be reused, recycled or properly disposed of as hazardous waste at the end of the product's useful life 2) as part of the product's description either in the catalog or on the website used to place the online order.

New York Law (mercury-added products): The labeling of “mercury-added consumer products” (see definition above) must clearly and conspicuously state that mercury is present in the product and the product must not be disposed of or placed in a waste stream destined for disposal in mixed municipal solid waste until the mercury is removed and reused, recycled or otherwise managed to ensure that the mercury does not become part of solid waste or contaminate groundwater. ([Environmental Conservation Law § 27-2103](#)). The labeling must be conspicuous to the consumer prior to purchase, and during the installation and removal of the product, and affixed to the product so as to remain legible for the useful life of the product.

Texas (computer equipment):

Texas requires manufacturers to affix a permanent, readily visible label to the computer equipment with the manufacturer's brand(s). [Texas Admin Code, Tit. 30, Rule § 328\(a\)\(2\)](#). Computer equipment is “[a] desktop or notebook computer, including a computer monitor or other display device that does not contain a tuner. Computer equipment includes its accompanying keyboard and mouse if the keyboard and mouse are from the same manufacturer as the computer equipment.” [Texas Admin Code, Tit. 30, Rule § 328.135](#).

Mandatory labelling on packaging

What are the mandatory labelling on the packaging ?

Federal Law: See the "Electronic equipment with Bluetooth" card for further information on regulations applicable to intentional radiators. For requirements applicable to unintentional radiators, please see the “Sun Charger, Electrical Charger, USB Charger” card.

See the "Batteries" card for further information on federal and state regulations applicable to some batteries and battery charging systems.

FCC regulations for radio frequency devices

For any electronic products in this category that qualify as “intentional radiators” as defined in the Definitions section, please see the “Electronic Equipment with Bluetooth” card for relevant requirements. For electronic products in this category that qualify as “unintentional radiators” as defined in the Definitions section, please see the “Sun Charger, Electrical Charger, USB Charger” card.

Massachusetts Law (mercury-added products): In addition to the label on the product, the packaging for a mercury-added product must also be labeled, except when the product label can easily be viewed through the packaging, to inform prospective

purchasers and product users, prior to purchase, that the product contains mercury and will need to be managed properly at the end of its useful life ([MGL 21H, 310 CMR 75](#)). The label must be consistent with the product labeling requirements.

Where labels on the product or product packaging are not clearly visible and legible to prospective purchasers and product users prior to purchase, (e.g., in sales transactions that occur over the internet, telephone or postal service), the manufacturer or retailer must clearly inform the purchaser 1) that the product contains mercury and shall clearly specify that the mercury-added product be reused, recycled or properly disposed of as hazardous waste at the end of the product's useful life 2) as part of the product's description either in the catalog or on the website used to place the online order.

Mandatory labelling on the instructions manual

What are the mandatory labelling on the instructions manual (if one is required) ?
In which format, do we have to deliver the instruction manual to our customers ?

In general, instructions for use should identify all reasonably foreseeable hazards and state the consequences of consumer actions explicitly. See CPSC, [Manufacturer's Guide to Developing Consumer Product Instructions](#) (October 2003).

See the "Electronic equipment with Bluetooth" card for further information on regulations applicable to intentional radiators.

For requirements applicable to unintentional radiators, please see the "Sun Charger, Electrical Charger, USB Charger" card.

See the "Batteries" card for further information on regulations applicable to some batteries.

Warnings - General ones

Are general warnings required ? If yes, which ones ?

See the "Electronic equipment with Bluetooth" card for further information on regulations applicable to intentional radiators.

For requirements applicable to unintentional radiators, please see the "Sun Charger, Electrical Charger, USB Charger" card.

See the "Batteries" card for further information on regulations applicable to some batteries.

General instructions or labels should identify all reasonably foreseeable hazards associated with a product and state the consequences of consumer actions explicitly. See CPSC, [Manufacturer's Guide to Developing Consumer Product Instructions](#) (October 2003).

Warnings - Specific ones

Are specific warnings required ? If yes which ones ?

See the "Electronic equipment with Bluetooth" card for further information on regulations applicable to intentional radiators.

For requirements applicable to unintentional radiators, please see the "Sun Charger, Electrical Charger, USB Charger" card.

See the "Batteries" card for further information on regulations applicable to some batteries.

Illinois Law (lead): No one may sell any lead-bearing substance that may be used by the general public, unless it bears a warning statement as provided by federal law ([410 ILS 45](#)). If no federal rule exists, lead-bearing substances that contain lead-based paint or other form of lead must be labeled as: ""WARNING CONTAINS LEAD. MAY BE HARMFUL IF EATEN OR CHEWED. MAY GENERATE DUST CONTAINING LEAD. KEEP OUT OF THE REACH OF CHILDREN." The warning statement must be located in a prominent place on the item or package, such that consumers are likely to see the statement

when it is examined under retail conditions. The statement must be conspicuous and not obscured by other written matter. The statement must be legible and contrast with the typography, layout, and color of the other printed matter. Compliance with [16 CFR 1500.121](#) constitutes compliance with these display requirements. The manufacturer or importer of record is responsible for complying with these requirements. This requirement does not apply to any component part of a consumer electronic product, including, but not limited to, personal computers, audio and video equipment, calculators, wireless phones, game consoles, and handheld devices incorporating a video screen used to access interactive software and their associated peripherals, that is not accessible to a child through normal and reasonably foreseeable use of the product. A component part is not accessible if the component part is not physically exposed by reason of a sealed covering or casing and does not become physically exposed through reasonably foreseeable use and abuse of the product. Paint, coatings, and electroplating, singularly or in any combination, are not sufficient to constitute a sealed covering or casing. Coatings and electroplating are sufficient to constitute a sealed covering for connectors, power cords, USB cables, or other similar devices or components used in consumer electronics products.

"Lead-bearing substance" means any item containing or coated with lead such that the lead content is more than six-hundredths of one percent (0.06%) lead by total weight; or more than 1 milligram per square centimeter in the dried film of paint or previously applied substance.

Target Age

Is there any target age applicable? If so, does it have to be indicated and in which form?

Federal law does not require that a specific age range be specified, however, if the product would be more hazardous for children below a certain age (e.g., because of use or potential misuses), we recommend stating a minimum age to reduce potential liability for use by children below that age.

Sanctions / Fines

What are the sanctions / fines in case of non conformity ?

Federal Law:

Failure to Adhere to Country of Origin Marking Requirements may result in imposition of an additional 10% duty, withholding of release from U.S. Customs until properly marked, and reimbursement of expenses of customs officials overseeing same.

FCC regulations for radio frequency devices For any electronic products in this category that qualify as "intentional radiators" as defined in the Definitions section, please see the "Electronic Equipment with Bluetooth" card for relevant sanctions information. For electronic products in this category that qualify as "unintentional radiators" as defined in the Definitions section, please see the "Sun Charger, Electrical Charger, USB Charger" card for relevant sanctions information.

See the "Batteries" card for further information on sanctions related to regulations applicable to some batteries.

California Law (batteries and battery charging systems): If this product contains batteries, please see the corresponding section of the Batteries card for penalty information. There are also specific requirements for battery charging systems under California law. Violations of the California Appliance Energy Efficiency Regulations, applicable to battery charging systems, are subject to administrative civil penalties of up to \$2,500 per unit. [20 CCR § 1609\(b\)\(1\)](#); [Cal. Pub. Res. Code § 25402.11\(a\)\(1\)](#). See the batteries card for additional details.

Illinois Law (lead): A manufacturer or importer who fails to properly label toys containing paint or lead-bearing substances subject to a civil fine between \$50 and \$5,000 per day and could face criminal penalties as well ([410 ILCS 45](#)).

Massachusetts Law (mercury-added products): A violation of this law may be punished by a fine of up to \$25,000 and/or imprisonment for up to two years for each violation; or a civil penalty up to \$25,000 for each violation. Each day each violation occur is a separate offense ([MGL 21H](#)).

New York Law (mercury-added products): Violation of New York's mercury-added consumer products labeling rules is punishable by a fine of up to \$100 for the first violation and up to \$500 for additional violations. ([Environmental Conservation Law § 71-2724](#)).

Environment

Recycling - Eco taxes

Which regulations concerning ecodesign and recycling apply to this product? Are there any ecotaxes applicable to this category of product?

Batteries (general): If this product contains batteries, please see the corresponding section of the Batteries card for additional requirements.

California: Note that electronic products with a screen size of greater than 4 inches measured diagonally, which are capable of playing a moving image (video display devices), may be subject to the California Electronic Waste Recycling Act unless they meet an exemption. It does not appear that Decathlon offers such products, but it is referenced here in the event that this becomes relevant for future offerings. The law requires several things: (1) restricts the hazardous materials that may be part of the product (material restrictions are based on EU RoHS, so if the product is RoHS compliant than it complies with the material restrictions of this law;]

(2) Retailer must collect an advance recovery fee (paid by consumer at time of sale) and send the fee to the [CA Department of Tax and Fee Administration](#) to fund the recovery and recycling of the devices by qualified entities;

(3) requires manufacturers to report on sales volume and hazardous substances used (if any).

Statute: [CA Pub. Res. Code 42464 - 42486](#); [California Health & Safety Code 25214.9 to 25214.10.2](#)

Regulations: <https://www2.calrecycle.ca.gov/Docs/Web/117057>

Manufacturer information: <https://calrecycle.ca.gov/electronics/manufacturer/>

Program overview <https://calrecycle.ca.gov/electronics/> , <https://calrecycle.ca.gov/Electronics/CEW/>

Massachusetts Law (mercury-added products): No person may sell or distribute a mercury-added product in Massachusetts unless the manufacturer has created and filed with the Massachusetts Department of Environmental Protection a collection plan for end-of-life mercury-added products, including a manufacturer take-back system or a recycling plan, the requirements of which are detailed in the regulations ([MGL 21H](#), [310 CMR 75](#)). A “mercury-added product” is a product to which the manufacturer intentionally introduces mercury, including, but not limited to, electric lamps, thermostats, automotive devices, electric switches, medical or scientific instruments, electric relays or other electrical devices. Every manufacturer of mercury-added products sold in Massachusetts is financially responsible for the collection and recycling systems and must pay an annual registration fee. These laws do not apply to mercury-added button cell batteries; mercury-added formulated products intended to be totally consumed in use, such as reagents, cosmetics, pharmaceuticals and other laboratory chemicals; or products where the only mercury contained in the product comes from a removable mercury-added button cell battery or a mercury-added lamp.

Washington Law (electronic recycling): Manufacturers of and retailers that sell certain “covered electronic products (CEPs)” in Washington must comply with registration, labeling, fee, and recycling requirements ([RCW 70.95N](#), [WAC 173-900](#)). CEPs include 1) any monitor having a viewable area greater than four inches when measured diagonally, 2) a laptop or portable computer, and 3) any video display device having a viewable area greater than four inches when measured diagonally. Certain products are excluded, but are not likely relevant to Decathlon, including medical devices, replacement parts for computers or vehicles, computers contained in appliances, and cell phones.

Manufacturers of CEPs must register with the Department of Ecology before sale of CEPs begin in Washington and must also annually update their registration. Manufacturers must also label CEPs with manufacturer information and pay an administrative fee as determined by Ecology. In addition, manufacturers must participate in a recycling plan, as dictated by the relevant laws and regulations cited above. Retailers must ensure that the manufacturer of its products is on the registration list and that the product is labeled with the manufacturer's brand name.

Labelling

What are the mandatory labellings to put on the product or on the packaging regarding the environmental rules ?

None identified.

Technical rules / Standards

General safety requirements

What are the general safety requirements ? Does a risk assessment have to be conducted ? If yes, does it concern specific risk ?

See the "Electronic equipment with Bluetooth" card for further information on regulations applicable to intentional radiators.

For requirements applicable to unintentional radiators, as defined, please see the "Sun Charger, Electrical Charger, USB Charger" card.

See the "Batteries" card for further information on regulations applicable to some batteries.

Mandatory or voluntary standards

Are there some mandatory or voluntary standards applicable ? If yes, which ones ?

Please indicate the reference of the applicable standards

See the "Electronic equipment with Bluetooth" card for further information on regulations applicable to intentional radiators.

For requirements applicable to unintentional radiators, as defined, please see the "Sun Charger, Electrical Charger, USB Charger" card.

See the "Batteries" card for further information on federal and state regulations applicable to some batteries and battery charging systems.

Voluntary Standards/Certifications

There are many voluntary standards that apply to products that contain electrical and battery components. These standards include those issued by UL, ANSI, ASTM, and IEEE, among others. While complying with these voluntary standards is expensive and not mandatory to sell products in the U.S. market, meeting at least one applicable voluntary safety standard is the norm and is important to ensure product safety and minimize liability if a product covered by these standards malfunctions in some way.

[UL voluntary standards](#) are particularly important for wall-powered and battery-powered devices, as UL standards are generally expected for products on the U.S. market. Depending on the product and safety standard, some CE standards

may be equivalent to UL or other standards. Decathlon may want to consult with an experienced testing lab regarding its electronic and battery-powered products to see if other qualifications they have, such as CE mark, cover the same areas as the UL standard applicable to that product.

One way product manufacturers can certify that a product complies with a voluntary standard is by working with a Nationally Recognized Testing Laboratory (NRTL). NRTLs are designated by the U.S. Occupational Safety and Health Administration (OSHA), which regulates certain equipment found in workplaces. OSHA's regulations are generally not applicable to the sale of consumer products; however, NRTLs have become the standard for consumer product safety certification. There are nearly twenty different NRTLs recognized by OSHA, a list of which can be found [here](#). Each NRTL has their own registered certification mark that may accompany a product that has been tested and certified for a certain standard by that NRTL. Note that UL is both a NRTL and a standard author. Other NRTLs, apart from UL, can certify that a product meets a UL standard. However, the mark on the product will be that of the NRTL, not of UL. To obtain a UL mark, the product must be tested by UL itself.

Physical and mechanicals properties

What are the physical and mechanicals properties required ?

See the "Electronic equipment with Bluetooth" card for further information on regulations applicable to intentional radiators.

For requirements applicable to unintentional radiators, as defined, please see the "Sun Charger, Electrical Charger, USB Charger" card.

See the "Batteries" card for further information on regulations applicable to some batteries.

The International Organization for Standardization (ISO) issued a standard for water-resistant watches, [ISO 22810:2010](#). This standard was designed for watches intended for ordinary daily use and are resistant to water during exercises such as swimming for a short period. A separate standard, [ISO 6425:2018](#), applies to diving watches. Neither of these standards is required by law. The FTC had rules regarding waterproof claims for watches, but revoked them in 1999, finding that the rules were unnecessary in part based on the sufficiency of the aforementioned ISO standards. However, the FTC did not make the ISO standards mandatory. [64 Fed. Reg. 30898](#).

There is a voluntary standard related to protection provided by enclosures of other electrical equipment, including resistance to water intrusion. See [IEC 60529](#) Degree of Protection Provided by Enclosures.

Electrical aspects

What are requirements regarding electrical aspects ?

See the "Electronic equipment with Bluetooth" card for further information on regulations applicable to intentional radiators.

For requirements applicable to unintentional radiators, as defined, please see the "Sun Charger, Electrical Charger, USB Charger" card.

See the "Batteries" card for further information on regulations applicable to some batteries.

There is a voluntary standard related to protection provided by enclosures of electrical equipment, including [IEC 60529](#) Degree of Protection Provided by Enclosures.

Inflammability

Are there any specific requirements to ensure inflammability?

None identified.

Hygiene

What are the rules regarding hygiene ?

None identified.

Radioactivity

What are the rules regarding radioactivity ?

See the "Electronic equipment with Bluetooth" card for further information on regulations applicable to intentional radiators.

For requirements applicable to unintentional radiators, as defined, please see the "Sun Charger, Electrical Charger, USB Charger" card.

See the "Batteries" card for further information on regulations applicable to some batteries.

Radiofrequency (2G,3G,4G,5G, Bluetooth, Ant+, GPS, Wifi...)

What are the rules regarding the radiofrequency?

See the "Electronic equipment with Bluetooth" card for further information on regulations applicable to intentional radiators, if applicable.

Products making noise

What are the requirements regarding products making noise ?

None identified.

Chemicals substances

What are the requirements regarding chemicals substances ? Which ones are forbidden ? Limited ? Do we have to clearly indicate all substances that are in the product, or is the indication of major substances enough?"

See the Chemical Substances Insert for additional information.

Packaging requirements

Can you please indicate if there are some requirements regarding the packaging of our products (mainly they are in paper, carton, plastic, textile) ? If yes, please explain them.

Federal Law: None identified.

CA Toxics in Packaging Prevention Act

The California Toxics in Packaging Prevention Act, [Cal. Health & Safety Code §§ 25214.11---25214.26](#), prohibits the production, sale, or promotion of packages or packaging components in which any of the metals cadmium, lead, mercury, or hexavalent chromium either (a) have been intentionally introduced, or (b) have a combined incidental presence greater than 100 parts per million by weight. A “package” is defined as any container providing a means of marketing, protecting, or handling a product, including unsealed receptacles such as crates, cups, wrapping films, and bags. A “packaging component” is defined as any individual assembled part of a package, including blocking, bracing, cushioning, weatherproofing, exterior strapping, coatings, closures, inks, labels, dyes, pigments, adhesives, stabilizers, or any other additives. [Id. § 25214.12](#).

The Toxics in Packaging Prevention Act distinguishes between “manufacturers” of packages and packaging components, versus “purchasers” who purchase and take title to a package or packaging component for the purpose of packaging a product manufactured, distributed, or sold by the purchaser. [Id. § 25214.12](#). Decathlon would be a “purchaser” under this law. Packaging manufacturers are required to provide a Certificate of Compliance to the purchaser of the packaging stating that the package or packaging component is in compliance with the Toxics in Packaging Prevention Act. If the manufacturer does not provide a Certificate of Compliance, the purchaser must request it. Purchasers are required to retain Certificates of Compliance for as long as a package or packaging component is being used. DTSC may request these from purchasers at any time. [Id. § 25214.16](#); see DTSC Fact Sheet, [Toxics in Packaging: Information for Purchasers of Packaging](#) (Jan. 2009).

Penalties. Violations of the CA Toxics in Packaging Prevention Act, [Cal. Health & Safety Code §§ 25214.11---25214.26](#), are subject to administrative penalties, [id. § 25187](#), and civil penalties for intentional or negligent violations of \$25,000 per separate violation or per day of a continuing violation, [id. § 25189](#). Knowing and intentional violations are punishable by a criminal fine of not less than \$5,000 nor more than \$100,000, by imprisonment for not more than one year, or by both the fine and imprisonment. [Id. § 25214.22.1](#). Purchasers of packaging who offer their own products for sale in packaging that violates this law may assert an affirmative defense that they relied on a Certificate of Compliance from the packaging manufacturer, had no reason to know the packaging was not in compliance, and took immediate corrective action upon receiving a notice of violation from DTSC. This affirmative defense is not available if a purchaser has already been found in violation at least two times in the preceding three years. [Id. § 25214.22](#).

CA Rigid Plastic Packaging Container Program

The California Rigid Plastic Packaging Container Program, [14 CCR §§ 17943–17949](#), requires product manufacturers who sell products held in RPPCs to meet one of several compliance options. “Rigid plastic packaging container” (RPPC) generally means a plastic packaging container that is made entirely of plastic (except for incidental portions of the packaging), has a relatively inflexible shape or form, has a capacity between 8 ounces and 5 gallons, and is capable of at least one closure. Compliance options include:

- Making the RPPC with at least 25% post-consumer material;
- Reducing the RPPC’s weight by at least 10%, including relative to similar packaging;
- Concentrating the [formulated] product held in the RPPC by at least 10%;
- Establishing that the RPPC is routinely reused at least 5 times;
- Establishing that the RPPC is routinely returned and refilled at least 5 times; or
- Establishing that the RPPC is recycled at least 45% of the time.

Container manufacturers are required to provide product manufacturers a certification of compliance for any RPPCs sold. Product manufacturers known or found to use RPPCs receive a 90-day notice from CalRecycle of registration requirements. If CalRecycle selects a product manufacturer for the compliance certification process, the manufacturer will receive a one-year notice of certification requirements (meaning, you would be notified a year ahead that you would need to certify compliance in the following calendar year). See CalRecycle, [California’s Rigid Plastic Packaging Container \(RPPC\) Program](#) (Dec. 2015).

Penalties. Under the California RPPC Program, [14 CCR §§ 17943–17949](#), non-compliant product manufacturers may be assessed penalties of up to \$100,000. Violations may include, but are not limited to, failure to submit all required information, submitting incomplete information, or failing to comply with the law. Under the law, there is a three phase approach: (1) companies may be contacted by DTSC requesting that they register; (2) a small subset of the registered companies will receive a notice that they may be required to certify compliance the following calendar year; (3) a smaller subset of the notified companies will actually have to certify compliance with the CA RPPC requirements. Note: per [CalRecycle’s webpage](#), have been no enforcement actions under this law since 2005.

CA Biodegradability Claims

[Cal. Pub. Res. Code §§ 42355–42358.5](#) restricts the use of “biodegradable,” “compostable,” and related claims about any plastic products or plastic packaging. It is unlawful to sell any product or packaging made of plastic — alone or in combination with other material — that is labeled “compostable,” “marine degradable,” “biodegradable,” “degradable,” “decomposable,” or in any other way implies that the item will break down, fragment, biodegrade, or decompose in a landfill or any other environment, unless the plastic product or plastic packaging meets the applicable standard of the following:

- [ASTM D6400](#) for compostable plastics; or
- [ASTM D6868](#) for biodegradable plastics used as coatings on paper and other compostable substrates.

See California State Attorney General, [Quick Reference Guide to “Biodegradable,” “Compostable,” and Related Claims on Plastic Products in California](#) (Dec. 2012).

Penalties (CA Biodegradability Claims): Violations of [Cal. Pub. Res. Code §§ 42355–42358.5](#) are subject to civil penalties of \$500 for the first violation of this chapter, \$1,000 for the second violation, and \$2,000 for the third and any subsequent violation.

CA Extended Producer Responsibility

On June 30, 2022, the governor signed [SB 54 \(Allen, Chapter 75, Statutes of 2022\)](#) that requires by 2032:

- 100% of packaging in the state to be recyclable or compostable
- 25% cut in plastic packaging
- 65% of all single-use plastic packaging be recycled

To stay informed on the latest information on the Packaging EPR rulemaking process and issues, sign-up for email updated by joining the [SB 54: Plastic Pollution Prevention and Packaging Producer Responsibility Act \(Packaging EPR\) listserv](#) or visit [this webpage](#).

Penalties. The department may issue a notice of violation to, and impose an administrative civil penalty not to exceed fifty thousand dollars (\$50,000) per day per violation on, any entity not in compliance with this chapter or any of the regulations the department adopts to implement this chapter, unless the entity meets the criteria of paragraph (5) of subdivision (a) of Section 42061, in which case the civil penalty shall not exceed twenty-five thousand dollars (\$25,000) per day per violation. Before determining whether to assess a penalty, the department may allow a producer or a PRO to develop and submit a corrective action plan to the department detailing how and when the producer or PRO will come into compliance. Cal. Pub. Res. Code § [42081](#).

Illinois Law

IL Heavy Metals in Packaging (SCOPE): A “package” means a container providing a direct means of marketing, protecting, or handling a product, and includes a product unit package, an intermediate package, or a shipping container as defined by ASTM D996 ([415 ILCS 5/21.5](#)). “Package” also includes such unsealed consumer product receptacles as carrying cases, crates, cups, pails, rigid foil and other trays, wrappers and wrapping films, bags, and tubs. “Packaging component” means any individual assembled part of a package including, but not limited to, any interior or exterior blocking, bracing, cushioning, weatherproofing, coatings, closure, ink, and labeling; except that coatings shall not include a thin tin layer applied to base steel or sheet steel during manufacturing of the steel or package ([415 ILCS 5/21.5](#)).

(PROHIBITION/REQUIREMENTS): No product may be offered for sale by its manufacturer or distributor in Illinois in a package that includes any ink, dye, pigment, adhesive, stabilizer, or other additive that contains lead, cadmium, mercury, or hexavalent chromium that has been intentionally introduced during manufacturing or distribution ([415 ILCS 5/21.5](#)). In addition, no package, packaging component, or product in a package may be offered for sale if the sum of the concentration levels of lead, cadmium, mercury, or hexavalent chromium present in the package or packaging component exceeds 100 ppm by

weight. Packaging components including strapping, seals, fasteners, and other industrial packaging components intended to protect, secure, close, unitize, or provide pilferage protection for a product destined for commercial use are excluded from this regulation. The manufacturer or supplier of the packaging must provide the package's distributor with a certificate of compliance stating that a package or packaging component complies with these requirements.

Penalties: Violators may be subject to a civil penalty up to \$50,000 for the violation and an additional civil penalty up to \$10,000 per day during which the violation continues ([415 ILCS 5/42](#)).

Maine Law

Reduction of Toxics in Packaging

"Package" means a container used in marketing, protecting or handling a product. "Package" includes a unit package and a shipping container defined by the American Society for Testing and Materials in its annual book of standards as ASTM, D996; a food package; and unsealed receptacles such as carrying cases, crates, cups, pails, rigid foil and other trays, wrappers and wrapping films, bags and tubs.

"Packaging component" means any individual assembled part of a package such as, but not limited to, any interior or exterior blocking, bracing, cushioning, weatherproofing, exterior strapping, coatings, closures, inks and labels. Tin-plated steel that meets the American Society for Testing and Materials specification A-623 must be considered as a single package component. Electrogalvanized coated steel and hot-dipped coated galvanized steel that meets the American Society for Testing and Materials specifications A-525 and A-879 must be treated in the same manner as tin-plated steel.

The act restricts the concentration levels of the following heavy metals contained in the packaging and packaging components to be less than 0.01% by weight:

- Lead
- Mercury
- Cadmium
- Hexavalent chromium

This act prohibits sales of food packaging containing phthalates and PFAS in Maine. This requirement does not apply to manufacturers of food or beverage products that have annual national sales of all food and beverage products of less than one billion dollars.

A manufacturer that is exempted from the phthalates and PFAS prohibition must submit a written request to the Department of Environmental Protection explaining that he or she fulfills the exemption requirements in this section.

The Department will decide whether they approve the exemption or not. A 2-year exemption may be granted to the qualified manufacturer. [32 M.R.S. 1733](#).

Penalties. Any manufacturer or supplier that violates the law could face a \$100 fine for each package or packaging component in violation. [32 M.R.S. 1736](#).

Coding of Plastic Containers

No person may distribute, sell, or offer for sale in Maine any plastic bottle or rigid plastic container without a molded, imprinted, or raised label indicating the type of plastic resin used to produce the plastic bottle or rigid plastic container. [32 M.R.S. § 1722](#).

Penalties: A violation shall be a civil violation for which forfeiture of not more than \$100 may be adjudged. Each container in violation constitutes a separate offense. [26 M.R.S. § 1725](#).

Maine Law (Extended Producer Responsibility Bill): Maine has established a [stewardship program for packaging](#). Producers of products will pay into a fund based on the amount and the recyclability of packaging associated with their products. These funds will be used to reimburse municipalities for eligible recycling and waste management costs, make investments in recycling infrastructure, and help Maine citizens understand how to recycle. This program's purpose is to reduce the volume and toxicity and increase the recycling of packaging material. It will provide support to municipalities in their recycling efforts and in doing so improve recycling outcomes for packaging material in Maine.

Massachusetts Law

MA Plastic Containers: No person may distribute or sell any plastic bottle or rigid plastic container in MA unless such product is labeled with a code indicating the plastic resin used to produce the bottle or container placed within a triangle of arrows ([MGL 94 § 323A](#)). "Rigid plastic container" includes any formed or molded container, other than a bottle, intended for single use, composed predominantly of plastic resin and having a relatively inflexible finite shape or form with a capacity of eight ounces or more but less than five gallons. "Plastic bottle" is defined as plastic container that has a neck that is smaller than the body of the container, accepts a screwtype, snap cap or other closure and has a capacity of sixteen fluid ounces or more, but less than five gallons ([MGL 94 § 321](#)).

Penalties (MA Plastic Containers): Violators are subject to a civil penalty up to \$1,000 for each violation ([MGL 94 § 327](#)).

New Jersey Law:

NJ Hazardous Packaging: Under New Jersey's hazardous packaging law, is unlawful to offer a product for sale in a package where the package or any of its packaging components, inks, dyes, pigments, adhesives, stabilizers or any other additives contain any lead, cadmium, mercury, or hexavalent chromium that (a) has been intentionally introduced during manufacturing or distribution, or (b) is incidentally present in excess of 100 parts per million by weight (0.01%). ([N.J.S.A § 13:1E-99.47](#)). New Jersey package manufacturers are required to provide certificates of compliance to product manufacturers such as Decathlon; Decathlon must retain this certificate so long as the product is in use. ([N.J.S.A § 13:1E-99.51](#)). It is a defense if Decathlon relies on the written assurance of the packaging manufacturer or distributor (signed by an authorized representative of the manufacturer or distributor) that the packaging complies with New Jersey's hazardous packaging law. ([N.J.S.A § 13:1E-99.54](#)).

Penalties: Violation of New Jersey's hazardous packaging law carries a fine of up to \$25,000 per day. ([N.J.S.A § 13:1E-99.53](#), [N.J.S.A § 13:1E-99.54](#)).

New York Law:

NY Hazardous Packaging. Under New York's hazardous packaging law, is unlawful to offer any product for sale in a package where the package or any of its packaging components, inks, dyes, pigments, adhesives, stabilizers or any other additives contain lead, cadmium, mercury or hexavalent chromium in excess of 100 parts per million by weight (0.01%). ([Environmental Conservation Law art 37, § 37-0205](#)). Note that it is a defense to any claim that Decathlon has violated New York's hazardous packaging law to show that Decathlon relied in good faith on the written assurance of the packaging manufacturer that the packaging met the requirements of New York's packaging law. This written assurance must be in the form of a certificate of compliance stating that the packaging is in compliance with Title 2 of Article 37 of the Environmental Conservation Law, and must also be signed by an authorized official from the packaging company.

Penalties: The first violation of New York's hazardous packaging law is punishable by a civil penalty not to exceed \$10,000; second and subsequent violations can result in fines up to \$25,000 for each violation. ([Environmental Conservation Law art 37, § 37-0201](#)).

Texas Law: No packaging specific requirements identified.

Washington Law:

WA Rigid Plastic Containers and Bottles: Rigid plastic containers and plastic bottles sold in Washington must be labeled with the resin type within triangular arrows ([RCW 70.95F](#)). Plastic is defined as material made of polymeric organic compounds and additives that can be shaped by flow. Rigid plastic container is a formed or molded container, other than a bottle, intended

for single use, composed predominantly of plastic resin, and having a relatively inflexible shape or form with a capacity 8 ounces to five gallons. A plastic bottle is a plastic container intended for single use that has a neck that is smaller than the body of the container, accepts a screw-type cap, snap cap, or other closure and has a capacity between 16 fluid ounces and five gallons.

Penalty (WA Rigid Plastic): One who sells a plastic bottle or rigid plastic container without appropriate labeling is subject to a civil penalty of \$50 for each violation, with a maximum of \$500 ([RCW 70.95F](#)). The seller may also be enjoined from continuing violations. Each distribution constitutes a separate offense.

WA Heavy Metals in Packaging: Packages and packaging components must contain less than 100 ppm of lead, cadmium, mercury, and hexavalent chromium ([RCW 70.95G](#)). The limit applies only if the metals were intentionally introduced as elements during manufacturing or distribution. Manufacturers must develop a certificate of compliance stating that its package or packaging component is in compliance with the metal requirements. Manufacturers must keep these certificates three years after the package's last sale or distribution, and certificates must be provided to the Washington Department of Ecology upon request.

Penalties (WA Heavy Metals Packaging). The Department of Ecology may prohibit the sale of any package for which a manufacturer has failed to respond to a request for a certificate of compliance within sixty days ([RCW 70.95G](#)).

Laboratory

In which laboratory can we perform the testing of the product according to the standard?

Federal Law:

FCC regulations for radio frequency devices

For any electronic products in this category that qualify as "intentional radiators" as defined in the Definitions section, please see the "Electronic Equipment with Bluetooth" card for relevant laboratory information. For electronic products in this category that qualify as "unintentional radiators" as defined in the Definitions section, please see the "Sun Charger/Electrical Charger" card for relevant laboratory information.

See the Electrical Aspects section of this card for information on Nationally Recognized Testing Laboratories for electronic approvals (not mandatory).

California Law

Proposition 65 does not require testing, however, if a company wishes to determine that a warning label is not required (and justify their decision not to label), testing may be conducted at any outside laboratory that is familiar with Proposition 65.

Sanctions / Fines

What are the sanctions / fines in case of non conformity ?

For penalties associated with packaging violations, please see the packaging technical requirements section above.

Federal Law:

Failure to adhere to Country of Origin Marking Requirements may result in imposition of an additional 10% duty, withholding of release from U.S. Customs until properly marked, and reimbursement of expenses of customs officials overseeing same.

FCC regulations for radio frequency devices

For any electronic products in this category that qualify as “intentional radiators” as defined in the Definitions section, please see the “Electronic Equipment with Bluetooth” card for relevant sanctions information. For electronic products in this category that qualify as “unintentional radiators” as defined in the Definitions section, please see the “Sun Charger/Electrical Charger” card for relevant sanctions information.

See the "Batteries" card for further information on sanctions related to regulations applicable to some batteries.

California Proposition 65: Any person who violates Proposition 65 by failing to provide a required warning regarding exposure to Proposition 65 listed chemicals may be liable for a civil penalty of up to \$2,500 per day for each violation. [Health & Saf. Code § 25249.7](#). In practice, Proposition 65 cases are typically settled with an average settlement amount in the \$50,000 range plus an agreement to either reformulate or provide Proposition 65 warnings for the product.

California Law (batteries and battery charging systems): If this product contains batteries, please see the corresponding section of the Batteries card for penalty information. There are also specific requirements for battery charging system under California law. Violations of the California Appliance Energy Efficiency Regulations, applicable to battery charging systems, are subject to administrative civil penalties for each non-compliant unit sold or offered for sale in California. [20 CCR § 1609\(a\)\(2\)](#). The enforcement regulations provide for civil penalties up to a maximum of \$2,500 per unit. [20 CCR § 1609\(b\)\(1\)](#); [Cal. Pub. Res. Code § 25402.11\(a\)\(1\)](#). See the batteries card for additional details.

Illinois Law (flame retardants): A person who manufactures or distributes products containing more than 0.001% of pentaBDE or octaBDE is subject to a fine between \$10,000 and \$25,000 for each violation ([410 ILCS 48](#)).

Maine Law (toxic chemicals): Violators may be subject to a \$2,500-\$25,000 criminal penalty for each day of the violation, except the minimum amount for knowing violations is \$5,000 for each day of the violation. Violators may be subject to a \$100-\$10,000 civil penalty for each day of the violation or, if the violation relates to hazardous waste, of not more than \$25,000 for each day of the violation. [38 M.R.S. § 349](#).

Maine Law (lead): This section may be enforced in a civil action brought by the Attorney General under the Maine Unfair Trade Practices Act, except that the following provisions apply as penalties for violations of this section.

A. For the first violation by a manufacturer a warning must be given instead of an enforcement by the Attorney General if the employer has the equivalent of 25 or fewer full-time, year-round employees.

B. For all other violations the following provisions apply as penalties for violations of this section.

(1) For the first violation of this section, the penalty is not more than \$100 per children's product manufactured, sold, distributed or offered for sale or distribution, with the total penalty not to exceed \$5,000.

(2) For a 2nd violation of this section, the penalty is not more than \$500 per children's product manufactured, sold, distributed or offered for sale or distribution, with the total penalty not to exceed \$25,000.

(3) For a 3rd or subsequent violation of this section, the penalty is not more than \$1,000 per children's product manufactured, sold, distributed or offered for sale or distribution, with the total penalty not to exceed \$50,000.

(4) A penalty under this section may be waived by the court if it is determined that the person in good faith and with due diligence attempted to comply with the requirements of this section and promptly corrected after discovery any noncompliance with this section. [252 M.R.S. 1316-A](#).

Massachusetts Law (lead): A person who applies lead-based paint or glaze to a covered product or sells such a product is subject to a fine between \$100 and \$500 for each violation ([MGL 111.196](#), [105 CMR 460](#)). Each article to which a lead-based substance is applied constitutes a separate violation. A person who willfully applies a lead-based substance to a toy or sells such a toy is subject to imprisonment for up to three months for each violation. In addition, any article of personal property in violation of the lead-based substance law may be embargoed by the Massachusetts Department of Environmental Protection.

Massachusetts Law (banned hazardous substances): Violators are subject to a fine between \$100 and \$500 and/or imprisonment up to 90 days on the first offense and on subsequent offenses, subject to imprisonment for up to 1 year and/or a fine between \$600 and \$3,000 ([MGL 94B § 4](#)). When an authorized inspector has probable cause to believe that a product is a banned hazardous substance, he must mark the substance as banned and give notice to the manufacturer, the distributor, and the owner of the product ([MGL 94B § 5](#)). He must also embargo the product. The manufacturer, distributor, or owner may remove the product from public display but may not remove it from the premises. The product will be considered a banned hazardous substance until the proceedings are complete. If the court finds that the embargoed article is banned, the article will be destroyed at the expense of the manufacturer, distributor, or owner under supervision of the inspector, and all court costs and fees and storage expenses will be taxed against the manufacturer, distributor or owner.

New York Law (flame retardants): Violation of New York's law regarding brominated flame retardants is also a misdemeanor; each product made, sold or offered for sale is a separate violation. ([Environmental Conservation Law art 37, § 37-0111\(5\)](#)).

Washington Law (PBDE ban): The Department of Ecology may issue a warning letter to a manufacturer that produces, sells, or distributes prohibited products (i.e., products containing the banned PBDEs) ([RCW 70.76](#)). If compliance is not achieved one year after the warning letter is sent, the Department of Ecology may assess civil penalties: up to \$1,000/violation for a first offense and up to \$5,000 for each repeat offense. In addition, a manufacturer that knowingly produces, sells, or distributes prohibited products must recall the product and reimburse the retailer or any other purchaser for the product and any applicable shipping and handling for returning the products.

Certifications / Registrations

Certifications or registrations

Are there some certifications or registrations applicable to the product ?

See the "Electronic equipment with Bluetooth" card for further information on regulations applicable to intentional radiators.

For requirements applicable to unintentional radiators, please see the "Sun Charger, Electrical Charger, USB Charger" card.

See the "Batteries" card for further information on regulations applicable to some batteries.

California (CEC Battery Charging System): Under the California Appliance Energy Efficiency Regulations for Battery Charger Systems ("BCS"), BCS must be certified prior to sale or offer for sale in California. Certified products will be listed on the California Energy Commissions Appliance Efficiency Database of certified BCS products. If a product in this category includes a BCS, please see the Batteries card for additional information on BCS certification

Massachusetts Law (mercury-added products): No mercury-added product shall be offered for final sale or use or distributed in the commonwealth without notification in writing by the manufacturer of the product to the department through IMERC within 30 days of the product's release in accordance with this section ([MGL 21H](#)).

Washington Law (electronic recycling): Manufacturers of covered electronic products must register with the Department of Ecology before sale of products begin in Washington and must also annually update their registration ([RCW 70.95N](#), [WAC 173-900](#)). Retailers must ensure that the manufacturer of its products is on the registration list. For more information regarding which products are covered, see the "Environment" tab.

Voluntary Standards/Certifications

There are many voluntary standards that apply to products that contain electrical and battery components. These standards include those issued by UL, ANSI, ASTM, and IEEE, among others. While complying with these voluntary standards is expensive and not mandatory to sell products in the U.S. market, meeting at least one applicable voluntary safety standard is

the norm and is important to ensure product safety and minimize liability if a product covered by these standards malfunctions in some way.

[UL voluntary standards](#) are particularly important for wall-powered and battery-powered devices, as UL standards are generally expected for products on the U.S. market. Depending on the product and safety standard, some CE standards may be equivalent to UL or other standards. Decathlon may want to consult with an experienced testing lab regarding its electronic and battery-powered products to see if other qualifications they have, such as CE mark, cover the same areas as the UL standard applicable to that product.

One way product manufacturers can certify that a product complies with a voluntary standard is by working with a Nationally Recognized Testing Laboratory (NRTL). NRTLs are designated by the U.S. Occupational Safety and Health Administration (OSHA), which regulates certain equipment found in workplaces. OSHA's regulations are generally not applicable to the sale of consumer products; however, NRTLs have become the standard for consumer product safety certification. There are nearly twenty different NRTLs recognized by OSHA, a list of which can be found [here](#). Each NRTL has their own registered certification mark that may accompany a product that has been tested and certified for a certain standard by that NRTL. Note that UL is both a NRTL and a standard author. Other NRTLs, apart from UL, can certify that a product meets a UL standard. However, the mark on the product will be that of the NRTL, not of UL. To obtain a UL mark, the product must be tested by UL itself.

Laboratory

[In case of mandatory certification/ registration that we must follow please precise the name and address of any laboratories where we can conduct them](#)

See the "Electronic equipment with Bluetooth" card for further information on regulations applicable to intentional radiators.

For requirements applicable to unintentional radiators, please see the "Sun Charger, Electrical Charger, USB Charger" card.

See the "Batteries" card for further information on regulations applicable to some batteries and battery charging systems.

Follow this link to approved [Nationally Recognized Testing Laboratories \(NRTL\)](#).

Importation rules

General rules

What are the general rules in order to import the product ?

Federal Law:

FCC regulations for radio frequency devices

For any electronic products in this category that qualify as "intentional radiators" as defined in the Definitions section, please see the "Electronic Equipment with Bluetooth" card for relevant provisions. For electronic products in this category that qualify as "unintentional radiators" as defined in the Definitions section, please see the "Sun Charger, Electrical Charger, USB Charger" card for relevant provisions.

See the Importation Rules Insert for additional information.

Documents

What are the required documents ?

Federal Law:

Entry Documents (for U.S. Imports generally):

Within 15 calendar days of the date that a shipment arrives at a U.S. port of entry, entry documents must be filed at a location specified by the port director. These documents are:

- Entry Manifest (CBP Form 7533) or Application and Special Permit for Immediate Delivery (CBP Form 3461) or other form of merchandise release required by the port director,
- Evidence of right to make entry,
- Commercial invoice or a pro forma invoice when the commercial invoice cannot be produced,
- Packing lists, if appropriate,
- Other documents necessary to determine merchandise admissibility.

If the goods are to be released from CBP custody at the time of entry, an entry summary for consumption must be filed and estimated duties deposited at the port of entry within 10 working days of the goods' entry

See <http://www.cbp.gov/sites/default/files/documents/Importing%20into%20the%20U.S.pdf> at pp. 12 and 35-37.

FCC regulations for radio frequency devices

For any electronic products in this category that qualify as “intentional radiators” as defined in the Definitions section, please see the “Electronic Equipment with Bluetooth” card for relevant provisions. For electronic products in this category that qualify as “unintentional radiators” as defined in the Definitions section, please see the “Sun Charger/Electrical Charger” card for relevant provisions.

For watches in particular:

Under [19 C.F.R. 141.89](#), all commercial shipments of watches and watch movements classifiable in Chapter 91 of the HTSUS must reflect the following information on the invoice, or on a separate sheet attached to and constituting a part of the invoice, with respect to each group, type, or model:

- (A) For watches, a thorough description of the composition of the watch cases, the bracelets, bands or straps; the commercial description (ebauche caliber number, ligne size and number of jewels) of the movements contained in the watches; and the type of battery (manufacturer's name and reference number), if the watch is battery-operated;
- (B) For watch movements, the commercial description (ebauche caliber number, ligne size and number of jewels). If battery-operated, the type of battery (manufacturer's name and reference number);
- (C) The name of the manufacturer of the exported watch movements and the name of the country in which the movements were manufactured.

Time period

In which time period may we obtain the right to import ?

None specified. But see tips for new importers and exporters at <http://www.cbp.gov/trade/basic-import-export/importer-exporter-tips>

Administration

What is the administration in charge of importations ? Name and address ?

U.S. Customs & Border Protection

OPA/CBP INFO Center

1300 Pennsylvania Avenue N.W., MS: 1345

Washington, DC 20229

United States of America

OPA/CBP INFO Center Phone contact information:

General Inquiries: 877-227-5511

International Callers: 202-325-8000

Inspection of the product

Inspection method

Does it exist an inspection procedure applicable to the product ? If yes, which administration is in charge of ? Can you please describe the procedure ?

U.S. CBP inspects imports generally.

See the "Electronic equipment with Bluetooth," "Sun Charger, Electrical Charger, USB Charger," and "Batteries" cards for additional information.

Commercialization rules

Notification / Declaration

What are the general rules in order to comercialize a product ?
Is there a notification / declaration to do ?

See the "Electronic equipment with Bluetooth" card for further information on regulations applicable to intentional radiators.

For requirements applicable to unintentional radiators, please see the "Sun Charger, Electrical Charger, USB Charger" card.

See the "Batteries" card for further information on regulations applicable to some batteries.

Documents

What are the required documents ?

See the "Electronic equipment with Bluetooth" card for further information on regulations applicable to intentional radiators.

For requirements applicable to unintentional radiators, please see the "Sun Charger, Electrical Charger, USB Charger" card.

See the "Batteries" card for further information on regulations applicable to some batteries.

Delay

What is the delay to obtain the right to commercialize ?

None identified.

Display in store

Is there some specific rules on the way to display the product in store ?

See the "Electronic equipment with Bluetooth" card for further information on regulations applicable to intentional radiators.

For requirements applicable to unintentional radiators, please see the "Sun Charger, Electrical Charger, USB Charger" card.

See the "Batteries" card for further information on regulations applicable to some batteries.

Display on internet

Is there some specific mentions to display the product on internet ?

None identified.

Information to consumers

Do some specific information to have be given to consumers when the product is placed on the market ?

See the "Electronic equipment with Bluetooth" card for further information on regulations applicable to intentional radiators.

For requirements applicable to unintentional radiators, please see the "Sun Charger, Electrical Charger, USB Charger" card.

See the "Batteries" card for further information on regulations applicable to some batteries.
